has a lot to do with how previous generations behaved towards the environment. Similarly, how we behave will determine the kind of environment future generations will have to contend with. It looks at the dynamics likely to impact the balance of nature. Also, because understanding what is biodiversity and why is it important are essential in order to grasp the concept of sustainability, this report looks at the types of ecosystems that form the biosphere and brings an answer to this important question, "Is the Maximum sustainable yield (MSY)

concept a fallacy?"
Moreover, the importance of cities is a key factor in environmental sustainability. So, the report shows the pros and cons of cities in both the preservation of the environment and the conservation of its biodiversity. The social, economic, and political analyses use the latest data and views from experts, scientists, and scholars alike and also the views of the common people. The result is that all three levels have positives and negatives and so, none of them should be individually prioritized over the other

Two. To tackle this dilemma,

the report offers an alternative: an inclusive, pluralistic, and global approach which aims at motivating all stakeholders - from rich and poor countries - and people from all walks of life to work together towards a common goal and common interests. Such an approach, says the report should be bottom-up instead of top-down, that is, the needs of local populations, especially those closer to biodiversity, must come first before those of large corporations. However, while in the present and short terms, this approach may be

successful, in the long term or a distant future, there are reasons to be skeptical for the environment is constantly changing and generations are different from one another. And that is very important because what constitutes the cornerstone of environmental sustainability is this: the present use of natural resources should not be harmful to future generations. Therefore, the report looks into the future. While acknowledging that, in terms of environmental sustainability, predicting the future is a daunting task - because it is better
