Pollution is the contamination of the environment by introduction of contaminants that can cause damage to environment and harm or discomfort to humans or other living species. It is the addition of another form of any substance or form of energy to the environment at a rate faster than the environment can accommodate it by dispersion, breakdown, recycling, or storage in some harmless form.

Environmental pollution is not a new phenomenon, yet it remains the world's greatest problem facing humanity, and the leading environmental cause of morbidity and mortality. In 2015 it was predicted that ill-health caused by pollution accounted for 9 million premature deaths, which is more than three times the number of deaths from malaria, AIDS, and tuberculosis put together (Landrigan et al., 2017).

Climate effects Land pollution can indirectly cause global warming. For example, deforestation in the rain forest leads to an increase in global warming since trees absorb CO₂. When they are cut down, large amounts of CO₂ are released in the atmosphere and thus the global warming process is enhanced.

The main cause of air pollution is industrial pumps, loud processors, etc. Hypertension and stress are crucial psychological problems caused by noise pollution. Radioactive pollution: It is the most dangerous of all the forms of environmental pollution. The effects caused by radioactive pollution are not temporary and almost irreparable.

Pollution: Causes, Effects and Control is the fourth edition of a best-selling introductory level book dealing with chemical and radioactive pollution in its broadest sense. The scope of the book ranges from the sources of pollutants and their environmental behaviour, to their effects on human and non-human receptors, to the technologies and strategies available for control. The fourth edition has been wholly revised and updated from the previous edition due to the rapid pace of developments in this field. Topics covered include chemical pollution of freshwater and marine environments, drinking water quality, water pollution biology, sewage and its treatment, toxic wastes, air pollution and atmospheric chemistry, control of pollutant emissions, land contamination, solid waste management, clean technologies, persistent organic pollutants in the environment, environmental radioactivity, health effects of environmental chemicals, legal control of pollution and integrated pollution control. There is a completely new chapter on Clean Technologies and Industrial Ecology, reflecting the growing importance of pollution prevention as opposed to end-of-pipe solutions. Whilst originally intended as an introductory reference work for professionals within the field, the book has been widely adopted for teaching purposes at the undergraduate and postgraduate level.

Environmental pollution is caused when contaminants enter the natural environment and cause adverse changes. Pollution can be of different types, such as air pollution, soil pollution and water pollution, among others. Combustion, mining, warfare, construction and agriculture are the anthropogenic contributors of air pollution. Other sources and activities that prove hazardous to the environment include nuclear waste disposal, coal-powered petrochemical plants, heavy industries, burning of natural vegetation, use of pesticides and herbicides, etc. Pollution affects human health significantly and can lead to cardiovascular and respiratory diseases, neurological problems, birth defects and cancers, besides others. The environmental effects of pollution include ocean acidification, biomagnification, occurrence of acid rain, global warming, biodiversity reduction, etc. The practices of recycling and reusing, use of compost, employing industrial wastewater treatment and sewage treatment are some of the effective techniques of controlling environmental pollution. This book unravels the recent studies in this field. Also included herein is a detailed explanation of the various causes, effects and control measures of environmental pollution. This book will serve as a reference to a broad spectrum of readers.
