This new edition of a classic text has now been extensively updated to include the latest developments in risk analysis and water quality assessment and management. It takes into account the role of ecological water quality in integrated regional and transboundary water resources management, according to the latest UNESCO programmes and the new EU-Water Framework Directive. This practice-oriented textbook is a unique tool for identifying and evaluating local and regional environmental risks from pollution hazards in groundwater, river water and coastal seawaters. The book explains different risk-based probabilistic methodologies and fuzzy logic-based approaches and includes various mathematical models for water quality simulation and theories, such as the decision analysis, the utility theory and the integrated risk-based multi-criteria assessment and management, in order to thoroughly evaluate several case studies from the real world. Questions testing the reader's understanding are given at the end of each chapter, and a useful appendix provides hints for answering them as well the solutions themselves.

It has been written as per the core module syllabus recommended by the UGC, with modifications to suit the requirements of the University of Jharkhand. The book provides the latest introductory view of essential topics in environmental studies in a simple and easy to understand style. KEY FEATURES* Rainwater harvesting and solid waste management * Formulae to calculate rainwater harvesting potential and sizes of settling tanks * Questions, ranging from multiple-choice to long essay type at the end of each unit. * Answers to the multiple-choice questions * Information on websites and search engines, with examples

More specifically, for university and college instructors using this work in such wealthier countries, in a credit-based course where a tuition fee is accessed, students should be instructed to purchase the paid version of this content on Google Play which is organized as one of six Parts (organized chapters). One exception to this request is a situation where a student is experiencing financial hardship. In this case, the student should use the individual chapters which are available from Google Play for free. The cost of these Parts works out to only \$0.99
