Exploration Remote Sensing
Itc - mobile-pixels.com

Remote sensing is a series of techniques that study the Earth's surface with the help of datasets recorded from various types of sensors. These sensors can either be satellite-based, airborne or mounted on drones, where the former are more suitable for acquiring regional information and the latter for more detailed data on smaller study areas.

Geological Remote Sensing Group - ITC

Geothermal exploration and monitoring We focus on remote sensing - from drill core to space - of geothermal systems, to develop exploration techniques in the context of energy transition. Through long-term monitoring of geothermal fields we try to understand the natural effects of environmental changes and the anthropogenic effects of exploitation on the 'motor of geothermal systems'.
