For over twenty years, A History of Anthropological Theory has provided a strong foundation for understanding anthropological thinking, tracing how the discipline has evolved from its origins to the present day. The sixth edition of this important text offers substantial updates throughout, including more balanced coverage of the four fields of anthropology, an entirely new section on the Anthropocene, and significantly revised discussions of public anthropology, gender and sexuality, and race and ethnicity. Written in accessible prose and enhanced with illustrations, key terms, and study questions in each section, this text remains essential reading for those interested in studying the history of anthropology. On its own or used with the companion volume, Readings for a History of Anthropological Theory, sixth edition, this text provides comprehensive coverage in a flexible and easy-to-use format for teaching in the anthropology classroom.

Readings for a History of Anthropological Theory curates and collects many of the most important publications of anthropological thought spanning the last hundred years, building a strong foundation in both classical and contemporary theory. The sixth edition includes seventeen new readings, with a sharpened focus on public anthropology, gender and sexuality, race and ethnicity, linguistic anthropology, archaeology, and the Anthropocene. Each piece of writing is accompanied by a short introduction, key terms, study questions, and further readings that elucidate the original text. On its own or together with A History of Anthropological Theory, sixth edition, this anthology offers an unrivalled introduction to the theory of anthropology that reflects not only its history but also the changing nature of the discipline today.

In this time of mass communication, rich people like us know very well the horrible conditions in which many poor people must live. In "Affluent in the Face of Poverty" Jos Philips wonders what we should do about poverty. The book argues that if we can

do great good at little cost to ourselves, we ought to do so - and perhaps we ought to do great good even if the cost to ourselves of doing so, is not small. Also, it is argued that rich individuals like us can often, at little cost to ourselves, undertake a number of concrete actions which help to fight poverty, and that we are morally obligated to undertake acts such as giving tithes, living within our ecological footprint, and frequently buying fair trade products.

In this innovative volume, twelve leading scholars from corporate research labs and independent consultancies tackle the most fundamental and contentious issues in corporate ethnography. Organized in pairs of chapters in which two experts consider different sides of an important topic, these provocative encounters go beyond stale rehearsals of method and theory to explore the entanglements that practitioners wrestle with on a daily basis. The discussions are situated within the broader universe of ethnographic method and theory, as well as grounded in the practical realities of using ethnography to solve problems in the business world. The book represents important advances in the field and is ideal for students and scholars as well as for corporate practitioners and decision makers.

For years, What the Face Reveals has been a singular collection of previously published original research using the Facial Action Coding System (FACS) to study facial behavior. Accompanying each article is an author commentary, prepared for this book, on the value of bringing FACS-based measurement to their area of study. The new third edition includes new research findings and applications, and extends the focus of earlier volumes to showcase the development of Animal FACS systems and applications of automated FACS measurement. What the Face Reveals is an indispensable reference to anyone who uses FACS in their research, as the studies showcased here employ a variety of methodological and design technique for the use of FACS that could be replicated or extended in other research contexts. New to this Edition: --Revised to include 50% new contributions, reflecting changes in facial measurement in the 21st century --New structure organized around six areas of FACS research: Animal FACS, Automated Measurement, Basic Affective Science, Development, Pain, Psychopathology, and Social and Health Psychology

The German philosopher Immanuel Kant famously defined anthropology as the study of what it means to be a human being. Following in his footsteps "Anthropology and the Human Subject" provides a critical, comprehensive and wide-ranging investigation of conceptions of the human subject within the Western intellectual tradition, focusing specifically on the secular trends of the twentieth century. Encyclopaedic in scope, lucidly and engagingly written, the book covers the man and varied currents of thought within this tradition. Each chapter deals with a specific intellectual paradigm, ranging from Marx's historical materialism and Darwin's evolutionary naturalism, and their various off shoots, through to those currents of thought that were prominent in the late twentieth century, such as, for example, existentialism, hermeneutics, phenomenology and

poststructuralism. With respect to each current of thought a focus is placed on their main exemplars, outlining their biographical context, their mode of social analysis, and the "ontology of the subject" that emerges from their key texts. The book will appeal not only to anthropologists but to students and scholars within the human sciences and philosophy, as well as to any person interested in the question: What does it mean to be human? "Ambitions in scope and encyclopaedic in execution...his style is always lucid. He makes difficult work accessible. His prose conveys the unmistakable impression of a superb and meticulous lecturer at work." Anthony P Cohen Journal Royal Anthropological Institute "There is a very little I can add to the outstanding criticism Brian Morris levels at deep ecology...Insightful as well as incisive...I have found his writings an educational experience." Murray Bookchin Institute of Social Ecology

Victims of Progress, now in its sixth edition, offers a compelling account of how technology and development affect indigenous peoples throughout the world. Bodley ' s expansive look at the struggle between small-scale indigenous societies, and the colonists and corporate developers who have infringed their territories reaches from 1800 into today. He examines major issues of intervention such as social engineering, economic development, self-determination, health and disease, global warming, and ecocide. Small-scale societies, Bodley convincingly demonstrates, have survived by organizing politically to defend their basic human rights. Providing a provocative context in which to think about civilization and its costs—shedding light on how we are all victims of progress—the sixth edition features expanded discussion of “ uprising politics,” Tebtebba (a particularly active indigenous organization), and voluntary isolation. A wholly new chapter devotes full coverage to the costs of global warming to indigenous peoples in the Pacific and the Arctic. Finally, new appendixes guide readers to recent protest petitions as well as online resources and videos.
