fastener tightening analysis is to use the basic elastic torque-tension equation, $T = K \cdot D \cdot F$, to estimate the relative magnitudes of torque and clamp force. Starting with this equation, which defines a linear relationship between torque and tension, you can develop models for the tightening process.

~~A designer's guide to the specification of fasteners~~

"Thread-forming, high-low, thread-cutting, and self-tapping screws are four common threaded fasteners used in plastics." Design engineers are often challenged to find the right type of fastener for the right application. Two of the biggest challenges are lack of experience and information.
