Individuals can find answers to the FEMA IS-700 exam by taking the FEMA IS-700.A National Incident Management System Training (NIMS) course. This course is an introduction to NIMS. It includes a consistent overview of this vital government program. NIMS is an essential part of the National Preparedness System.

This guidance was developed in coordination with Federal, State, tribal, and local Public Information Officers (PIOs). The goal of this publication is to provide operational practices for performing PIO duties within the Incident Command System (ICS). It offers basic procedures to operate an effective Joint Information System (JIS). During an incident or planned event, coordinated and timely communication is critical to effectively help the community. Effective and accurate communication can save lives and property, and helps ensure credibility and public trust. This Basic Guidance for Public Information Officers provides fundamental guidance for any person or group delegated PIO responsibilities when informing the public is necessary. The guidance also addresses actions for preparedness, incident response, Joint Information Centers (JICs), incident recovery, and Federal public information support. The guidance material is adaptable to individual jurisdictions and specific incident conditions.

Course Overview This course describes the role, design, and functions of Emergency Operations Centers and their relationships as components of a multi-agency coordination system. The course contains disaster-related examples, activities and case studies that relate to EOC's and multi-agency coordination systems at the local, state and federal levels of government. Course Objectives: At the end of the course, students should be able to: *Relate EOC operations to National Incident Management System (NIMS) requirements. *Describe the role that EOCs play in overall multiagency coordination. *Describe the relationship between the EOC and the on-scene Incident Command System (ICS) structure. *Identify staffing, information, systems, and equipment needs at the EOC. *Determine whether participants' EOC organizations are conducive to effective coordination. *Identify potential alternate locations suitable for EOC operations should the primary EOC facility become damaged or inoperable. *Create a test, training and exercise plan for critical EOC operations. *Develop a strategy and schedule for reviewing EOC resource requirements and technology needs.

Comprehensive Preparedness Guide (CPG) 101 provides Federal Emergency Management Agency (FEMA) guidance on the fundamentals of planning and developing emergency operations plans (EOP). CPG 101 shows that EOPs are connected to planning efforts in the areas of prevention, protection, response, recovery, and mitigation. Version 2.0 of this Guide expands on these fundamentals and encourages emergency and homeland security managers to engage the whole community in addressing all risks that might impact their jurisdictions. While CPG 101 maintains its link to previous guidance, it also reflects the reality of the current operational planning environment. This Guide integrates key concepts from national preparedness policies and doctrines, as well as lessons learned from disasters, major incidents, national assessments, and grant programs. CPG 101 provides methods for planners to: Conduct community-based planning that engages the whole community by using a planning process that represents the actual population in the community and involves community leaders and the private sector in the planning process; Ensure plans are developed through an analysis of risk; Identify operational assumptions and resource demands; Prioritize plans and planning efforts to support their seamless transition from development to execution for any threat or hazard; Integrate and synchronize efforts across all levels of government. CPG 101 incorporates the following concepts from operational planning research and day-to-day experience: The process of planning is just as important as the resulting document; Plans are not scripts followed to the letter, but are flexible and adaptable to the actual situation; Effective plans convey the goals and objectives of the intended operation and the actions needed to achieve them. Successful operations occur when organizations know their roles, understand how they fit into the overall plan, and are able to execute the plan. Comprehensive Preparedness Guide (CPG) 101 provides guidelines on developing emergency operations plans (EOP). It promotes a common understanding of the fundamentals of risk-informed planning and decision making to help planners examine a hazard or threat and produce integrated, coordinated, and synchronized plans. The goal of CPG 101 is to make the planning process routine across all phases of emergency management and for all homeland security mission areas. This Guide helps planners at all levels of government in their efforts to develop and maintain viable all-hazards, all-threats EOPs. Accomplished properly, planning provides a methodical way to engage the whole community in thinking through the life cycle of a potential crisis, determining required capabilities, and establishing a framework for roles and responsibilities. It shapes how a community envisions and shares a desired outcome, selects effective ways to achieve it, and communicates expected results. Each jurisdiction's plans must reflect what that community will do to address its specific risks with the unique resources it has or can obtain. Planners achieve unity of purpose through coordination and integration of plans across all levels of government, nongovernmental organizations, the private sector, and individuals and families. This supports the fundamental principle that, in many situations, emergency management and homeland security operations start at the local level and expand to include Federal, state, territorial, tribal, regional, and private sector assets as the affected jurisdiction requires additional resources and capabilities. A shared planning community increases the likelihood of integration and synchronization, makes planning cycles more efficient and effective, and makes plan maintenance easier.

"This course is for emergency managers and related professionals working with all types of volunteers and coordinating with voluntary agencies. [It] provides procedures and tools for building and working with voluntary organizations."--Page 4 of cover.

"The objective of this report is to identify and establish a roadmap on how to do that, and lay the groundwork for transforming how this Nation- from every level of government to the private sector to individual citizens and communities - pursues a real and lasting vision of preparedness. To get there will require significant change to the status quo, to include adjustments to policy, structure, and mindset"--P. 2.

Libraries have always played a special role in times of disaster by continuing to provide crucial information and services.

Course Overview This independent study course prepares students to successfully assume the role and responsibilities of a Geospatial Information System (GIS) Specialist during a disaster situation. As they complete this course, students will learn how to use their GIS skills to support other members of a Joint Field Office (JFO) disaster response and recovery team and successfully meet the responsibilities assigned to them. Students will also learn what types of products need to be produced and what procedures must be followed to ensure that products are produced correctly and in a timely manner. Course Objectives: -Recognize the role a GIS Specialist performs while supporting a response and recovery operation -Identify likely sources of information and data within FEMA and the emergency management community -Identify the types of products commonly needed by FEMA programs and decision makers during an operation -Recognize best practices for establishing and maintaining data flow, products and timelines during an incident -Recognize how to appropriately handle and protect licensed, sensitive, or personal data -Recognize how to use Remote Sensing products Primary Audience This course is designed primarily for GIS Specialists newly employed with FEMA or other emergency response organizations. Students should already have a basic working knowledge of standard GIS software applications. Prerequisites Prior to completing this course, it is highly recommended that the student have: -Opened the Geospatial Information System Specialist (GISP) task book, or -Held the equivalent position in the NRCC/RRCC (when developed) Students must also have basic geospatial knowledge and skills, including: -Knowledge of how to make a map and other geospatial products -Knowledge of basic analytics -Knowledge of the basic fundamentals of cartography and geospatial terminology -The ability to use standard GIS software and equipment such as: -ESRI's ArcGIS software, including Spatial Analyst -Adobe products -Google Earth -Large format printers -Microsoft Office suite -Handheld GPS devices -Modeling and decision support software such as HAZUS -Computers Note: Students may come to FEMA with prior geospatial training and knowledge, or it may be developed through on-the-job training or courses.

EMI has revised the ICS 100 course to reflect lessons learned since its release in 2006. This course is NIMS compliant and uses the objectives developed collaboratively by the National Wildfire Coordinating Group, the United States Fire Administration, the United States Department of Agriculture and the Emergency Management Institute. Note: IS-100.b is an updated version of the IS-100.a course. If you have successfully completed IS-100 or IS-100.a, you may want to review the new version of the course. For credentialing purposes, the courses are equivalent. ICS 100, Introduction to the Incident Command System, introduces the Incident Command System (ICS) and provides the foundation for higher level ICS training. This course describes the history, features and principles, and organizational structure of the Incident Command System. It also explains the relationship between ICS and the National Incident Management System (NIMS). The Emergency Management Institute developed its ICS courses collaboratively with: -National Wildfire Coordinating Group (NWCG) -U.S. Department of Agriculture -United States Fire Administration's National Fire Programs Branch NIMS Compliance This course is NIMS compliant and meets the NIMS Baseline Training requirements for I-100.
