It's an authoritative study in comparative religion. You may reach the conclusion that "Facts are, indeed, Stranger than Fiction".

In 2010 Jacinta Tynan innocently sparked a media storm when her article in the Sun Herald

exposed a fault line in our perception of motherhood. Her premise - that motherhood could be easy - split the parenting community down the middle. Many agreed with Jacinta while others argued that motherhood was arduous and thankless, all were equally passionate in their beliefs. Four years later, now with two small children, Jacinta takes us on a fascinating journey through her own experiences of motherhood - from being so sick with her first pregnancy that she was throwing up in between her on - air segments, to her doubts about her ability to cope - and shows us her struggle to parent 'consciously', using meditation and attempting mindfulness to help her find her path. While on this journey, Jacinta gives us a compelling analysis of the ideas and philosophies that surround contemporary parenting, as she also tries to understand why her comments caused such a storm. She asks other parents, health practitioners and childcare experts some key questions, such as: Why do we feel so strongly about sleep, breastfeeding and discipline for our children? · Why do some parents find parenting easy and others a terrible trial? · And why are mothers made to feel so guilty, all the time? Part memoir about her experiences as a new mum, part passionate manifesto, Mother Zen questions whether society's default position - that parenting is a tough and unrewarding job - is a valid one and opens up an important debate that goes to heart of our identity. What kind of values are we passing on to our children? And are we teaching them, or are they teaching us?

From the bestselling author of *Blood and Money: A haunting true story of three people locked in a fierce struggle against time and the sea—and each other.* In July 1973, Bob Tininenko; his wife, Linda; and his brother-in-law, Jim Fisher, set sail from Tacoma, Washington, on a thirty-one-foot trimaran down the West Coast to Costa Rica. The journey was expected to take a matter of weeks, but ten days into the cruise, the party encountered a freak storm off the coast of northern California. When gale-force winds and fifty-foot waves capsized their boat, the voyage became a nightmare. For seventy-two days, the trio was lost at sea. Challenged by nature and compromised by a bitter rivalry, their courage and will to live was put to the ultimate test. Jim, the owner and skipper of the boat, was a devout fundamentalist whose recognition of God 's will in every event brought him into increasing conflict with his brother-in-law. As the two men battled to take control of a dire situation, Linda kept a secret that would lead to heartrending tragedy. A “ hair-raising ” (Houston Chronicle) account of shipwreck and survival and a searing portrait of faith without reason, *Lost!* is an unforgettable true story from “ a writer of tremendous power and achievement ” (Detroit Free Press).

This text is for courses that are typically called (Introductory) Differential Equations, (Introductory) Partial Differential Equations, Applied Mathematics, and Fourier Series. Differential Equations is a text that follows a traditional approach and is appropriate for a first course in ordinary differential equations (including Laplace transforms) and a second course in Fourier series and boundary value problems. Some schools might prefer to move the Laplace transform material to the second course, which is why we have placed the chapter on Laplace transforms in its location in the text. Ancillaries like Differential Equations with Mathematica and/or Differential Equations with Maple would be recommended and/or required ancillaries. Because many students need a lot of pencil-and-paper practice to master the essential concepts, the exercise sets are particularly comprehensive with a wide range of exercises ranging from straightforward to challenging. Many different majors will require differential equations and applied mathematics, so there should be a lot of interest in an intro-level text like this. The accessible writing style will be good for non-math students, as well as for undergrad classes.

The "Shadow Tree Series" comprises a unique collection of Western Esoteric studies and practices which Jacobus G. Swart, spiritual successor to William G. Gray, has actuated and taught over a period of forty years. "The Book of Self Creation" is a study guide for all who seek God within and who prefer to steer the courses of their lives in a personal manner. The doctrines and techniques addressed in this book will aid practitioners in the expansion of personal consciousness and spiritual evolution. Combining the principles and teachings of Kabbalah and Ceremonial Magic, the book offers step by step instructions on the conscious creation of physical life circumstances, such being always in harmony with the mind-set of the practitioner. "The Book of Self Creation is a rich and resourceful workbook of practical kabbalah from the hands of a master kabbalist who is both compassionate and insightful." - Caitlín Matthews

The dramatic evolution of catalytic converters in the last thirty years was a result of a need worldwide to reduce pollution created by the exhaust gases of internal combustion engines. Environmental concerns have led American, Japanese and European Union (EU) legislation to pose continuously stricter emission limits for petrol engines in the last decades. The catalytic converter has become the most important means of exhaust treatment to achieve the desired emission limits. The international legislation has also created a need for a regular assessment of the efficiency of the catalytic converter in order to detect a deterioration of its conversion efficiency as soon as this deterioration takes place. The assessment of conversion efficiency of a catalytic converter can take place during normal driving of a vehicle (on-board diagnosis or OBD) or in a workshop by specialized technicians. The most important methods nowadays are the OBD methods. The evolution of methods concerned with OBD and non-OBD monitoring and diagnosing of efficiency of catalytic converters of internal combustion engines is described based on patents and published patent applications. Non-patent references are also used. The basic principles of modern catalytic converters are described in an extensive Introduction, where the importance of monitoring and diagnosing the efficiency of catalytic converters is demonstrated. The book is divided into four parts. The first part describes methods involving the use of oxygen or air/fuel exhaust gas sensors to determine the oxygen storage capacity of a catalytic converter. The second part describes methods involving the use of temperature sensors to determine the exothermic reaction capacity of a catalytic converter. The third part describes all other methods existing in patent literature that monitor and diagnose the efficiency of catalytic converters. The great majority of the methods of the third part involves exhaust gas concentration measurements. The fourth part comprises a general discussion of all methods described. In the beginning of each part, a short introduction is given to explain the problem that the methods attempt to solve. The methods in each part are presented in chronological order per patent applicant. This helps to evaluate how the patent applicant has improved his methods over time. A patent number index with information about the patent applicants, inventors, priorities and patent-families, an inventor index, a company index and a subject index can be found at the end of the book.

An Introduction to Electric Circuits is essential reading for first year students of electronics and electrical engineering who need to get to grips quickly with the basic theory. This text is a comprehensive introduction to the topic and, assuming virtually no knowledge, it keeps the mathematical content to a minimum. As with other textbooks in the series, the format of this book enables the student to work at their own pace. It includes numerous worked examples throughout the text and graded exercises, with answers, at the end of each section.

Nothing beats the companionable crackle of an open fire. Fires invite us to sit and share stories or watch in contemplative silence. We feel drawn to the flickering flames, the gentle

curls of aromatic smoke and reassuring radiant heat. Snuggled under a blanket, toasting crumpets and listening to the pleasing pops of burning wood – what better way to spend a winter's evening? Or, come the summer, few pleasures are richer than cooking food, perched around a campfire, waiting for the stars to come out. But for all this talk, how many of us know how to build a fire? Would we know which kinds of trees burn best? Could we make our own firelighters or build the perfect fire stack? The Little Book of Building Fires is a richly illustrated pocket guide to sourcing, seasoning and storing firewood, choosing kindling and tinder, and how to build and light the perfect fire. From campfires to woodburners, bonfires to open hearths, this book blends practicality with personal experience and will get you back in touch with your ancient firemaking instincts.

The New York Times bestselling author and survival expert covers hundreds of skills and strategies to help you be ready when disaster strikes. If you 're concerned that the world is becoming increasingly unstable, you are far from alone. From natural disasters to terrorism, pandemics, and economic collapse, there are a whole host of catastrophic events to be concerned about. And preparing for the worst is going mainstream. Outdoor Life: Prepare for Anything will take you through a wide range of potential threats and how you can prepare for them, from having the right gear on hand to knowing what to do in the wake of a disaster. This is the book for the growing prepper movement, with hands-on hints, easy-to-use checklists, and engaging first-person stories to break down the crucial do 's and don 'ts, educate yourself on various threats, and help to ensure that you ride out whatever Mother Nature, the government, foreign powers, or modern society can throw at you. Includes vital information on: • How to prep for a natural disaster, economic collapse, or societal restructuring. • What should be stocked in your house, pantry, basement, bunker, and go-bag. • How to handle yourself and your family in the wake of disaster, from creating a plan to leading your neighborhood watch.

No matter if a great job or a fulfilling sport, you are simply the best! Nobody can compete with you. Are you looking for a beautiful, inspirational and motivational gift for someone special? This is a blank, lined journal that's perfect for your loved one. Other details include: 110 pages, 6x9, white paper and a beautiful, matte-finished cover. This journal is the best gift that will allow you to express yourself to the world.
