Abou El Fadl (Islamic law, UCLA School of Law) wrote the 62 brief essays here over the course of five years. Through a combination of musings and critical reflections on classical Muslim authors, he both traces Muslim intellectual history and also confronts questions of ethics, faith, law, politics, culture, and modern identity. He ranges over many facets of Islam in the contemporary world, exploring censorship, political oppression, terrorism, the veil and the treatment of women, marriage, parental rights, the dynamics between law and morality, the character of the prophet Muhammad, and other topics. About half the essays first appeared in The minaret magazine. c. Book News Inc.

This introduction to networking on Linux now covers firewalls, including the use of ipchains and Netfilter, masquerading, and accounting. Other new topics in this second edition include Novell (NCP/IPX) support and INN (news administration).

Teaching text developed by U.S. Air Force Academy and designed as a first course emphasizes the universal variable formulation. Develops the basic two-body and n-body equations of motion; orbit determination; classical orbital elements, coordinate transformations; differential correction; more. Includes specialized applications to lunar and interplanetary flight, example problems, exercises. 1971 edition.

The IAU Centenary Symposium was held at its General Assembly in Vienna in 2018. It starts with plenary lectures, by Malcolm Longair on 100 years of astronomy, astrophysics and cosmology, and by Catherine Cesarsky, who reflects on a century of IAU history. There follows reminiscences from past IAU presidents and general secretaries and presentations on various aspects of IAU history, including some of the famous astronomers who served the Union. The volume then examines the relations between the IAU and different geographical regions, including the issues relating to the Central Powers after World War I, and the "China crisis", when China withdrew from the Union in 1960 and was absent for two decades. The IAU's internal structures and organization are reviewed, along with trends in astronomical publishing and astronomical education. IAU S349 finishes with a vision of the IAU's future from its current president, Ewine van Dishoeck.

David Poole's innovative book emphasizes vectors and geometric intuition from the start and better prepares students to make the transition from the computational aspects of the course to the theoretical. Poole covers vectors and vector geometry first to enable students to visualize the mathematics while they are doing matrix operations. With a concrete understanding of vector geometry, students are able to visualize and understand the meaning of the calculations that they will encounter. By seeing the mathematics and understanding the underlying geometry, students develop mathematical maturity and can think abstractly when they reach vector spaces. Throughout the text, Poole's direct conversational writing style connects with students, and an abundant selection of applications from a broad range of disciplines clearly demonstrates the relevance of linear algebra.

Since the late 1980s, growing migration from countries with a Muslim cultural background, and increasing Islamic fundamentalism related to terrorist attacks in Western Europe and the US, have created a new research field investigating the way states and ordinary citizens react to these new phenomena. However, whilst we already know much about how Islam finds its place in Western Europe and North America, and how states react to Muslim migration, we know surprisingly little about the attitudes of ordinary citizens towards Muslim migrants and Islam. Islamophobia has only recently started to be addressed by social scientists. With contributions by leading researchers from many countries in Western Europe and North America, this book brings a new, transatlantic perspective to this growing field and establishes an important basis for further research in the area. It addresses several essential questions about Islamophobia, including: what exactly is Islamophobia and how can we measure it? how is it related to similar social phenomena, such as xenophobia? how widespread are Islamophobic attitudes, and how can they be explained? how are Muslims different from other outgroups and what role does terrorism and 9/11 play? Islamophobia in the West will be of interest to students and scholars of sociology, religious studies, social psychology, political science, ethnology, and legal science.

The first book to cover all engineering aspects of microwave communication path design for the digital age Fixed point-to-point microwave systems provide moderate-capacity digital transmission between well-defined locations. Most popular in situations where fiber optics or satellite communication is impractical, it is commonly used for cellular or PCS site interconnectivity where digital connectivity is needed but not economically available from other sources, and in private networks where reliability is most important. Until now, no book has adequately treated all engineering aspects of microwave communications in the digital age. This important new work provides readers with the depth of knowledge necessary for all the system engineering

details associated with fixed point-to-point microwave radio path design: the why, what, and how of microwave transmission; design objectives; engineering methodologies; and design philosophy (in the bid, design, and acceptance phase of the project). Written in an easily accessible format, Digital Microwave Communication features an appendix of specialized engineering details and formulas, and offers up chapter coverage of: A Brief History of Microwave Radio Microwave Radio Overview System Components Hypothetical Reference Circuits Multipath Fading Rain Fading Reflections and Obstructions Network Reliability Calculations Regulation of Microwave Radio Networks Radio Network Performance Objectives Designing and Operating Microwave Systems Antennas Radio Diversity Ducting and Obstruction Fading Digital Receiver Interference Path Performance Calculations Digital Microwave Communication: Engineering Point-to-Point Microwave Systems will be of great interest to engineers and managers who specify, design, or evaluate fixed point-to-point microwave systems associated with communications systems and equipment manufacturers, independent and university research organizations, government agencies, telecommunications services, and other users.

New Volume 2B edition of the classic text, now more than ever tailored to meet the needs of the struggling student.
