processing also fish should be kept under ice. Filletting the fish in pre-rigor gives higher fillet yield, less dripless and gaping. Handling of post-rigor fish is easy and uniform quality is maintained. Frozen fish stored for long period shows soft texture, loss of flavour and toughness upon cooking.

Quality problems in fish processing

The group said the chemicals are classed as additives and their use in food processing must be approved under EC Regulation 1333/2008. No technical effect Polyphosphates function as sequestrant has an antioxidative effect and stabilises the white colour during the preservation of the fish.

EC vetoes polyphosphates as fish processing aid

The fish, highly nutritious, as first class animal protein and balanced food with essential amino acids in correct proportions for human and animal lives, deteriorates very fast after its death being cold-blooded animal.
