The Floating Egg begins with the search for an alchemist's secret and ends with the re-imagination of a past world. Each chapter is connected to a particular corner of northeast England, and each explores the uncertain line where myth is dissolved into science and belief gives way to knowledge. For example, one episode shows how the fall of Constantinople converted the common rock of the Yorkshire cliffs into a source of extraordinary wealth and power, and how this, in turn, uncovered the inhabitants of a succession of past worlds. The stories move from documentary accounts to fictional recreations of historic events, from contemporary writings and illustrations to present-day reflection. By using different ways of describing the world of scientific endeavor, the author has produced a fascinating, visually beautiful, and highly entertaining book that allows us to witness the birth of a new science—geology.

Six Records of a Floating Life (1809) is an extraordinary blend of autobiography, love story and social document written by a man who was educated as a scholar but earned his living as a civil servant and art dealer. In this intimate memoir, Shen Fu recounts the domestic and romantic joys of his marriage to Yün, the beautiful and artistic girl he fell in love with as a child. He also describes other incidents of his life, including how his beloved wife obtained a courtesan for him and reflects on his travels through China. Shen Fu's exquisite memoir shows six parallel 'layers' of one man's life, loves and career, with revealing glimpses into Chinese society of the Ch'ing Dynasty.

Few realize what a vital role World War II and Florida played in each other's history. The war helped Florida move past its southern conservative mentality and emerge as a sophisticated society, and thousands of military men were trained under Florida's sunny skies. Here are stories from some of the one hundred military bases, including Tyndall Field, where Clark Gable trained, and Eglin Air Force Base, where Doolittle planned his raid on Tokyo. Read about Camp Gordon Johnston, referred to as "Hell by the Sea," built in a swampy, snake-infested subtropical jungle, and uncover the secrets of "Station J," a base that monitored the transmissions of German U-boats prowling off the coast. This fascinating collaboration between historians Nick Wynne and Richard Moorhead reveals the lasting impact of World War II on Florida as the United States heads into the seventieth anniversary of its entry into the war.
