ANSYS Workbench Mechanical supports Inertia Relief in a static analysis. An example helps explain Inertia Relief. Consider a structure that has mass, and a vertical load that exceeds its weight. Without constraint in the vertical direction, the global stiffness matrix is singular, and no solution exists.

You do not need to place the force exactly in the middle of the cross-section due to selecting a face to apply the force to in ANSYS. Click the ISO view (central light blue ball on the axes) to see the bar in profile with the axial load attached now. Now you need to add the fixed support condition to the other end of the axial bar.
