Answers - atcloud.com*

Base your answer to the following question on the cross sections below, which show widely separated outcrops labeled I, II, and III. Index fossils are found in some of the rock layers in the outcrops. In outcrop III, layers A, B, C, and D are labeled. Line Y represents an unconformity. Line GH represents a fault.

Fossil correlation – Science Learning Hub

For example, once they note that the ammonite fossil, due to its presence in the Cretaceous period, is older than the Pecten index fossil, they can see that Layer C is actually the oldest layer, as the Ammonite fossil is at the top of that layer, and superposition dictating the the subsequent layers underneath are older. When lab groups are struggling with this problem, I find that they only need a gentle push to refer to the notes
