The Hearing: Frequency and Volume Gizmo™ allows you to test how well you hear tones at different frequencies. The frequency of a sound wave is measured in hertz (Hz), where 1 Hz is equal to one wave passing each second. Frequency is related to the pitch of a sound, or whether it sounds high (like a whistle) or low (like a tuba).

...

Launch Gizmo. Test your hearing range by listening to low-, medium-, and high-frequency sounds. Compare the relative loudness of sounds at each frequency to create an equal-loudness curve. In a quiet room, measure your threshold of audibility for each frequency, and compare your results to others. The volume of each sound can be adjusted.

In this Gizmo, the reference sound is the softest audible sound.

Correct Answer: A. 30 Hz 2. Imagine that you created the equal-loudness curve shown below. If you then played each sound at the decibel level shown, which frequency of sound would sound the loudest to you? Correct Answer: D. They would all seem to have the same volume.
