This book presents in as clear a way as possible the New Testament material dealing with women and their roles in the context of the movement Jesus began. Dr Witherington begins by illustrating the roles of women in Judaism, in the Hellenistic world, and in the Roman Empire. She goes on to show how Jesus broke significantly with convention in the way he viewed women and their roles, offering as he did a wholly new conception of the legitimate rights of women in society. An analysis follows of the apostle Paul's attitude toward women, which shows how he agreed with and differed from the ideas of his contemporaries. The concluding chapters discuss the evangelists, whose selection and presentation of material with respect to women casts much light on the early Church's understanding of women and their roles. This comprehensive survey, which avoids slanting its material to serve a modern patriarchal or feminist bias, comes to the exciting conclusion that we can see in the New Testament an attempt to reform the patriarchal orientation of the day.

"Examining recent scientific discoveries, astronomer and pastor Dr. Hugh Ross explores the opening chapters in Genesis and shows how they hold some of the strongest scientific evidence for the Bible?s supernatural accuracy. Navigating Genesis expands upon Ross? earlier book The Genesis Question (1998), integrating the message of both the Bible and science?without compromise?giving skeptics and believers common ground for dialogue."--Publisher's website.

NASA's Genesis mission, launched on August 8, 2001 is the fifth mission in the Discovery series. Genesis addresses questions about the materials and processes involved in the origin of the solar system by providing precise knowledge of solar isotopic and elemental compositions for comparison with the compositions of meteoritic and planetary materials. This book describes the Genesis mission, the solar wind collector materials, the solar wind concentrator and simulations of its performance, the plasma ion and electron instruments, and the way these two instruments are used to determine the solar wind flow regime on board the spacecraft. The book is of interest to all potential users of the data returned by the Genesis mission, to those studying the isotopic and chemical composition of the early solar system whose work will be influenced by the measurements made by Genesis and by all those interested in the design and implementation of space instruments to study space plasmas.
