Amy's life has drastically changed. She's found herself taking on the huge responsibility of running Heartland, the horse refuge that was her mother's life work. The one constant for Amy has been her friendship with Ty, Heartland's 17-year-old stable hand. But the arrival of a new hand, Ben, throws

everything off balance. By the time Amy realizes she's taken Ty for granted, it could be too late.

Have economists neglected trust? The economy is fundamentally a network of relationships built on mutual expectations. More than that, trust is the glue that holds civilization together. Every time we interact with another person—to make a purchase, work on a project, or share a living space—we rely on trust. Institutions and relationships function because people place confidence in them. Retailers seek to become trusted brands; employers put their trust in their employees; and democracy works only when we trust our government. Benjamin Ho reveals the surprising importance of trust to how we understand our day-to-day economic lives. Starting with the earliest societies and proceeding through the evolution of the modern economy, he explores its role across an astonishing range of institutions and practices. From contracts and banking to blockchain and the sharing economy to health care and climate change, Ho shows how trust shapes the workings of the world. He provides an accessible account of how economists have applied the mathematical tools of game theory and the experimental methods of behavioral economics to bring rigor to understanding trust. Bringing together insights from decades of research in an approachable format, *Why Trust Matters* shows how a concept that we rarely associate with the discipline of economics is central to the social systems that govern our lives.

and to teach them the basics of living, moral responsibility, and respect. A Servant Book.

"From comedian, Esquire contributor, and former MTV VJ Dave Holmes, the hilarious memoir of a music geek and perpetual outsider fumbling his way toward self-acceptance, with the music of the '80s, '90s, and '00s as his soundtrack. Dave Holmes has spent his life on the periphery, nose pressed hopefully against the glass, wanting just one thing: to get inside. Growing up, he was the artsy kid in the sporty family. At his high school and Catholic college, he was the closeted gay kid surrounded by crush-worthy straight guys. And in his twenties, in the middle of a disastrous career in advertising, he accidentally became an MTV VJ overnight when he finished second, naturally, in the Wanna Be a VJ contest, opening the door to fame, fortune, and celebrity--you know, almost. But despite all the close calls, or possibly because of them, he just kept trying, and if (spoiler alert) he never quite succeeded, at least he got some good stories out of it. In *Party of One*, Dave tells the hilariously painful and painfully hilarious tales--in the vein of Rob Sheffield, Andy Cohen, Josh Kilmer-Purcell, Paul Feig, and Augusten Burroughs--of an outsider desperate to get in, of a misfit constantly changing shape, of a guy who finally learns to accept himself. Structured around a mix of hits and deep cuts from the '80s, '90s, and '00s--from Bruce Springsteen's 'Hungry Heart' to Wilson Phillips's 'Impulsive' to En Vogue's 'Free Your Mind' and beyond--and punctuated with interludes like 'So You've Had Your Heart Broken in the 1990s: A Playlist,' this book is for anyone who's ever felt like a square peg, especially those who

revised and expanded edition of Feedback Systems is a one-volume resource for students and researchers in mathematics and engineering. It has applications across a range of disciplines that utilize feedback in physical, biological, information, and economic systems. Karl Åström and Richard Murray use techniques from physics, computer science, and operations research to introduce control-oriented modeling. They begin with state space tools for analysis and design, including stability of solutions, Lyapunov functions, reachability, state feedback observability, and estimators. The matrix exponential plays a central role in the analysis of linear control systems, allowing a concise development of many of the key concepts for this class of models. Åström and Murray then develop and explain tools in the frequency domain, including transfer functions, Nyquist analysis, PID control, frequency domain design, and robustness. Features a new chapter on design principles and tools, illustrating the types of problems that can be solved using feedback Includes a new chapter on fundamental limits and new material on the Routh-Hurwitz criterion and root locus plots Provides exercises at the end of every chapter Comes with an electronic solutions manual An ideal textbook for undergraduate and graduate students Indispensable for researchers seeking a self-contained resource on control theory

“A remarkably nuanced, empathetic, and well-crafted work of journalism, [The Inevitable] explores what might be called the right-to-die underground, a world of people who wonder why a medical system that can do so much to try to extend their lives can do so little

to help them end those lives in a peaceful and painless way.”—Brooke Jarvis, *The New Yorker* More states and countries are passing right-to-die laws that allow the sick and suffering to end their lives at pre-planned moments, with the help of physicians. But even where these laws exist, they leave many people behind. *The Inevitable* moves beyond margins of the law to the people who are meticulously planning their final hours—far from medical offices, legislative chambers, hospital ethics committees, and polite conversation. It also shines a light on the people who help them: loved ones and, sometimes, clandestine groups on the Internet that together form the “euthanasia underground.” Katie Engelhart, a veteran journalist, focuses on six people representing different aspects of the right to die debate. Two are doctors: a California physician who runs a boutique assisted death clinic and has written more lethal prescriptions than anyone else in the U.S.; an Australian named Philip Nitschke who lost his medical license for teaching people how to end their lives painlessly and peacefully at “DIY Death” workshops. The other four chapters belong to people who said they wanted to die because they were suffering unbearably—of old age, chronic illness, dementia, and mental anguish—and saw suicide as their only option. Spanning North America, Europe, and Australia, *The Inevitable* offers a deeply reported and fearless look at a morally tangled subject. It introduces readers to ordinary people who are fighting to find dignity and authenticity in the final hours of their lives.

studying the statistics of the behaviour of its individual constituents, whether they are atoms, molecules, photons, etc. It provides the link between macroscopic and microscopic states, and as such has the potential to be one of the most satisfying parts of an undergraduate science course - linking in an elegant manner the quantum world with everyday observations of systems containing large numbers of particles. This excellent text is designed to introduce the fundamentals of the subject of statistical mechanics at a level suitable for students who meet the subject for the first time. The treatment given here is designed to give the student a feeling for the topic of statistical mechanics without being held back by the need to understand complex mathematics. The text is concise and concentrates on the understanding of fundamental aspects. Numerous questions with worked solutions are given throughout.
