This book presents both the challenges and opportunities that exist for addressing the critical needs of black children, who have been historically underserved in the U.S. education system.

Classroom-based Evaluation in Second Language Education has been written to help foreign and second language educators in planning and carrying out effective and comprehensive evaluations in their classrooms. The book emphasizes the

Value of classroom-based assessment as a tool for improving both teaching and learning. The presentation is non-technical and does not require a specialized background in psychometrics, statistics, or research. The suggested assessment procedures are useful for a broad range of proficiency levels, teaching situations, and instructional approaches. Preview questions and follow-up activities assist the reader in applying the material discussed in each chapter.

High-stakes public examinations exert a dominant influence in most education systems. They affect both teacher and student behavior, especially at the middle and upper levels of secondary education. The content of past examinations tends to

dictate what is taught and how it is taught and, more important, what is learned and how it is learned. By changing aspects of these examinations, especially their content and format, education systems can have a strong positive impact on teacher behavior and student learning, help raise student achievement levels, and better prepare students for tertiary-level education and for employment. Examination agencies, many of which have followed the same procedures over decades, can learn from the successes and failures of other systems. This book addresses current issues related to the development, administration, scoring, and usage of these high-stakes public examinations, identifying key issues and problems related to examinations in many emerging market economies as well

as in advanced economies. The book's primary audience consists of public examination officials on national, regional, and state examination boards, but the book should also be of interest to senior education policy makers concerned with certification and learning achievement standards, to academics and researchers interested in educational assessment, to governmental and education agencies responsible for student selection, and to professionals at development organizations. This extremely well-written and comprehensive book offers a timely review of the diversity of public examination practices worldwide; of the tensions between examinations and learning; and of the technical expertise involved in the creation of valid, reliable, and fair

assessments. It reminds us that as "the diploma disease" takes hold with an ever-greater intensity at every stage of education worldwide, and the commercial business of testing flourishes, those concerned with educational quality and meaningful learning must be on guard to prevent the assessment tail wagging the educational dog." Angela W. Little, Professor Emerita, Institute of Education, University College London

"This book is very well structured and written and draws on the authors' remarkable global knowledge across countries and histories. It will be a great asset both to administrators responsible for examinations and to academics and other professionals who seek to understand the nature and impact of examinations of different types and in different settings." Assessment for learning is meant to engage, motivate, and enable students to do better in their learning. However, how students themselves perceive assessments (both high-stakes qualifications and low-stakes monitoring) is not well understood. This volume collects research studies from Europe, North and South America, Asia, and New Zealand that have deliberately focused on how students in primary, secondary, and tertiary education conceive of, experience, understand, and evaluate assessments. Assessment for learning has assumed that formative assessments and classroom practices would be an unqualified success in terms of student learning outcomes.

Making use of a variety of qualitatively interpreted focus groups, observations, and interviews and factor-analytic survey methods, the studies collected in this volume raise doubts as to the validity of this formulation. We commend this volume to readers hoping to stimulate their own thinking and research in the area of student assessment. We believe the chapters will challenge researchers, policy makers, teacher educators, and instructors as to how assessment for learning can be implemented.

This book considers the evolution of medical education over the centuries, presents various theories and

principles of learning (pedagogical and andragogical) and discusses different forms of medical curriculum and the strategies employed to develop them, citing examples from medical schools in developed and developing nations. Instructional methodologies and tools for assessment and evaluation are discussed at length and additional elements of modern medical teaching, such as writing skills, communication skills, evidence-based medicine, medical ethics, skill labs and webinars, are fully considered. In discussing these topics, the authors draw upon the personal experience that they have gained in learning, teaching and disseminating knowledge in many parts of the world over the past four decades. Medical Education in Modern Times will be of interest for medical students, doctors, teachers, nurses,

This publication describes the key issues facing the school education system in Pakistan, highlights the challenges, and suggests some possible directions for reform---with a focus on two provinces: Sindh and Punjab. While average years of schooling in Pakistan have increased along with life expectancy and per capita income, inequality remains high and, by other education measures, the record remains dismal. Illiteracy is widespread and almost 23 million children aged 5-16 are not in school---a worrying statistic for a country whose current workforce is young, mostly unskilled, and poorly prepared for productive employment.
