Human muscle system, the muscles of the human body that work the skeletal system, that are  
under voluntary control, and that are concerned with movement, posture, and balance. Broadly  
considered, human muscle—like the muscles of all vertebrates—is often divided into striated  
muscle (or skeletal muscle), smooth muscle, and cardiac muscle.

*human muscle system | Functions, Diagram, & Facts | Britannica*

In gross anatomy, the nerves to skeletal muscles are branches of mixed peripheral nerves.  
The branches enter the muscles about one third of the way along their length, at motor points.  
Motor points...

charge for movement.

## *Muscular System Anatomy and Physiology - Nurseslabs*

Gross anatomy is the most important branch of human anatomy. It deals with the study of the gross structure of the human body. It is concerned with macroscopic details of human body structure, so it does not require the aid of any instrument. It is generally done by naked eyes on dead bodies; therefore, it is also known as cadaveric anatomy.

Muscle fibers are covered by the endomysium. The gross anatomy of a muscle is the most important indicator of its role in the body. There is an important distinction seen between pennate muscles and other muscles. In most muscles, all the fibers are oriented in the same direction, running in a line from the origin to the insertion.
