# File Type PDF Guidelines For Periodontal Therapy

A panel of experts convened by the American Dental Association (ADA) Council on Scientific Affairs presents an evidence-based clinical practice guideline and systematic review on nonsurgical treatment of patients with chronic periodontitis by means of scaling and root planing (SRP) with or without adjuncts. For patients with chronic periodontitis, SRP showed a moderate benefit, and the benefits were judged to outweigh potential adverse effects.

EBD: Nonsurgical Treatment of Chronic Periodontitis  
AAP treatment guidelines stress that periodontal health should be achieved in the least invasive and most cost-effective manner. This is often accomplished through non-surgical periodontal treatment. Non-surgical periodontal

treatment does have its limitations. When it does not achieve periodontal health, surgery may be indicated to restore periodontal health.

Non-Surgical Periodontal Treatment | Perio.org

CHICAGO — Dentists treating patients with chronic periodontitis, a severe form of gum disease that can lead to tooth loss, are advised to use scaling and root planing (SRP), deep cleaning of the teeth, as initial treatment, according to new guidelines from the American Dental Association (ADA). The guidelines, based on a systematic review and meta-analysis of treatment of periodontitis, were published in the July issue of the Journal of the American Dental Association (JADA).
