An adhesive is applied to the substrate, or adherend, surfaces; the joint is formed by holding the components together while the adhesive hardens to develop structural properties, forming a bond to both surfaces.

This chapter provides information on the ultrasonic welding that is used for joining plastic parts. The parts are placed together and high frequency vibration and pressure are exerted at the joint, which melts the plastic and to cause a weld. This joint can be as strong as the plastic itself. This method usually cycles within less than two seconds.

Applied Plastics Engineering Handbook: Processing, Materials, and Applications, Second Edition, covers both the polymer basics that are helpful to bring readers quickly up-to-speed if they are not familiar with a particular area of plastics processing and the recent developments that enable practitioners to discover which options best fit their requirements. New chapters added specifically cover polyamides, polyimides, and polyesters. Hot topics such as 3-D printing and smart plastics are also included, giving plastics engineers the information they need to take these embryonic technologies and deploy them in their own work. With the increasing demands for lightness and fuel economy in the automotive industry (not least due to CAFE standards), plastics will soon be used even further in vehicles. A new chapter has been added to cover the technology trends in this area, and the book has been substantially updated to reflect advancements in technology, regulations, and the commercialization of plastics in various areas. Recycling of plastics has been thoroughly revised to reflect ongoing developments in sustainability of plastics. Extrusion processing is constantly progressing, as have the elastomeric materials, fillers, and additives which are available. Throughout the book, the focus is on the engineering aspects of producing and using plastics. The properties of plastics are explained, along with techniques for testing, measuring, enhancing, and analyzing them. Practical introductions to both core topics and new developments make this work equally valuable for newly qualified plastics engineers seeking the practical rules-of-thumb they don't teach you in school and experienced practitioners evaluating new technologies or getting up-to-speed in a new field. Presents an authoritative source of practical advice for engineers, providing guidance from experts that will lead to cost savings and process improvements Ideal introduction for both new engineers and experienced practitioners entering a new field or evaluating a new technology Updated to include the latest technology, including 3D Printing, smart polymers, and thorough coverage of biopolymers and biodegradable plastics

The first illustrated guidebook that answers the age-old question: Can I Recycle This? Since the dawn of the recycling system, men and women the world over have stood by their bins, holding an everyday object, wondering, "can I recycle this?" This simple question reaches into our concern for the environment, the care we take to keep our homes and our communities clean, and how we interact with our local government. Recycling rules seem to differ in every municipality, with exceptions and caveats at every turn, leaving the average American scratching her head at the simple act of throwing something away. Taking readers on a quick but informative tour of how recycling actually works (setting aside the propaganda we were all taught as kids), Can I Recycle This gives straightforward answers to whether dozens of common household objects can or cannot be recycled, as well as the information you need to make that decision for anything else you encounter. Jennie Romer has been working for years to help cities and states across America better deal with the waste we produce, helping draft meaningful legislation to help communities better process their waste and produce less of it in the first place. She has distilled her years of experience into this non-judgmental, easy-to-use guide that will change the way you think about what you throw away and how you do it.
