~~Most reported outbreaks of the disease histoplasmosis share the same scenario: Individuals who caused or were near disturbances of dusty material contaminated with Histoplasma capsulatum, inhaled spores of this fungus, and became ill did not know the health risks associated with their activities. Consequently, because of a lack of knowledge about histoplasmosis, employers and their employees were inadequately or not at all prepared to take effective preventive action.~~

## File Type PDF Histoplasmosis Protecting Workers At Risk Cdc

Histoplasmosis is an infection caused by inhaling fungus found in bird and bat droppings. It mainly affects the lungs. Most people show no effects or only minor flu-like symptoms. Yet it can be fatal if it spreads to other parts of the body. If you work around birds or bats, you may be at risk. The list of workers at potential risk includes:

Histoplasmosis is a disease caused by the fungus *Histoplasma capsulatum*. Symptoms of this infection vary greatly, but the disease affects primarily the lungs. Occasionally, other organs are affected; called disseminated histoplasmosis, it can be fatal if left untreated. Histoplasmosis is common among AIDS patients because of their suppressed immunity. In immunocompetent individuals, past infection results in partial protection against ill effects if reinfected. *Histoplasma capsulatum* is found in
