

## Holt Physics Momentum Problem 6a Answers

If you ally infatuation such a referred **holt physics momentum problem 6a answers** books that will manage to pay for you worth, acquire the agreed best seller from us currently from several preferred authors. If you desire to funny books, lots of novels, tale, jokes, and more fictions collections are furthermore launched, from best seller to one of the most current released.

You may not be perplexed to enjoy every books collections holt physics momentum problem 6a answers that we will categorically offer. It is not roughly the costs. It's roughly what you infatuation currently. This holt physics momentum problem 6a answers, as one of the most keen sellers here will totally be among the best options to review.

Holt Physics Problem 6A MOMENTUM PROBLEM An ostrich with a mass of 146 kg is running with a momentum of 2480 kg•m/s to the right. What is the velocity of the ostrich? SOLUTION Given:  $m = 146 \text{ kg}$   $p = 2480 \text{ kg}\cdot\text{m/s}$  to the right Unknown:  $v = ?$  Use the equation for momentum to solve for  $v$ .  $p = mv$   $v = \frac{p}{m}$   $v = \frac{2480 \text{ kg}\cdot\text{m/s}}{146 \text{ kg}}$   $v = 17.0 \text{ m/s}$  to the right

Practice 6A: | 1 | 2 | 3 | Go up Momentum - by Matt Henderson, 2003. 1. An Ostrich with a mass of 146 kg is running to the right with a velocity of 17 m/s . Find the momentum of the ostrich. Here's what you know,  $m = 146 \text{ kg}$  and  $v = 17 \text{ m/s}$  use the formula  $p = mv$  to find the power  $p = (146)(17) = 2482 \text{ kgm/s}$  (Table of contents) 2.
