A small investment in this book could save you a fortune. With the aid of this book's step-by-step expert guidance, you will discover all you need to know about the car you want to buy. The unique point system will help you to place the car's value in relation to condition.

"This system replaces the analog speedometer and tachometer gauge cluster of a 750 cc Honda motorcycle with a computerized monitor system based on the INTEL 8085A microprocessor and family of peripherals. The system adds the enhanced functionality of engine temperature, battery charging, fuel level, turn signal, and kick stand monitoring and status display. A security function is also employed as a guard against unauthorized use or theft. The speedometer and tachometer functions utilize phototransistor sensors generating pulses derived from stock cable connections to the engine block and front wheel. The engine temperature, fuel level, and battery charging functions are implemented via A/D conversion of external sensor inputs. Turn signal and kick stand status functions are implemented by software polling of external switches. The system incorporates a small keyboard for input of a five digit security code. If the code input is correct, ignition is enabled and normal operation may follow. If the code input is incorrect, ignition is disabled, and the motorcycle horn is

activated as an alarm. The operator is allowed two attempts at entrance of the five digit code. All system functions are displayed via various configurations of 7-segment and discrete LED displays for operator feedback. The system utilizes the twelve volt motorcycle power source and is contained on three double sided circuit boards. The system software was developed on the INTEL SDK85 system design prototype kit and transferred in final form to an on-board EPROM."--Abstract.

This reference book is a complete guide to the trends and leading companies in the engineering, research, design, innovation and development business fields: those firms that are dominant in engineering-based design and development, as well leaders in technology-based research and development. We have included companies that are making significant investments in research and development via as many disciplines as possible, whether that research is being funded by internal investment, by fees received from clients or by fees collected from government agencies. In this carefully-researched volume, you'll get all of the data you need on the American Engineering & Research Industry, including: engineering market analysis, complete industry basics, trends, research trends, patents, intellectual property, funding, research and development data, growth companies, investments, emerging technologies, CAD, CAE, CAM, and more. The book also contains major statistical tables covering everything from total U.S. R&D expenditures to the total number of scientists working in various disciplines, to amount of U.S. government grants for research.
