## Sharman Apt Russell

Every day, we wake up hungry. Every day, we break our fast. Hunger explores the range of this primal experience. Sharman Apt Russell, the highly acclaimed author of *Anatomy of a Rose* and *An Obsession with Butterflies*, here takes us on a tour of hunger, from eighteen hours without food to thirty-six hours to seven days and beyond. What Russell finds—both in our bodies and in cultures around the world—is extraordinary. It is a biological process that transcends nature to shape the very fabric of societies. In a fascinating survey of centuries of thought on hunger's unique power, she discovers an ability to adapt to it that is nothing short of miraculous. From the fasting saints of the early Christian church to activists like Mahatma Gandhi, generations have used hunger to make spiritual and political statements. Russell highlights these remarkable cases where hunger can inspire and even heal, but she also addresses the devastating impact of starvation on cultures around the world today. Written with consummate skill, a compassionate heart, and stocked with facts, figures, and fascinating lore, *Hunger* is an inspiring window on history and the human spirit.

An important, hopeful book that looks at the urgent problem of childhood malnutrition worldwide and the revolutionary progress being made to end it. A healthy Earth requires healthy children. Yet nearly one-

fourth of the world's children are stunted physically and mentally due to a lack of food or nutrients. These children do not die but endure a lifetime of diminished potential. During the past thirty years, says Sharman Russell, we have seen a revolution in how we treat these sick children and in how—with a new understanding of the human body and approach to nutrition, and new ways to reach out to hungry mothers and babies—we have gone from unwittingly killing severely malnourished children to bringing them back to health through the “miracle” of ready-to-eat therapeutic food. Intertwined with stories of scientists and nutrition experts on the front lines of finding ways to end malnutrition for good, Russell writes of her travels to Malawi, one of the poorest and least-developed countries in the world and also the site of pathbreaking, cutting-edge research into childhood malnutrition. (Eighty percent of Malawians are farmers subsisting on less than an acre of land and coping with erratic weather patterns due to global warming; fifty percent live below the poverty line; and forty-two percent of Malawi's children are affected by a lack of food or nutrients.) As she writes of her personal exploration of new friendships and insights in a country known as “the warm heart of Africa,” Russell describes the programs that are working best to reduce childhood stunting and explores how malnutrition in children is connected to climate change, how vitamins and

minerals are preventing these harmful effects, why the empowerment of women is the single most effective factor in eliminating childhood malnutrition, and what the costs of ending childhood malnutrition are. Sharman Russell, much-admired writer of luminous prose and humane heart, whose writing has been called, "elegant" (The Economist) and "extraordinarily well-crafted, far-reaching, and heart-wrenching" (Booklist), winner of the John Burroughs Medal for distinguished natural history writing, has written an illuminating, inspiring book that makes clear the promise of what is today, gratefully, within our grasp.

In *Anatomy of a Rose*, Sharman Apt Russell eloquently unveils the "inner life" of flowers. From their diverse fragrances to their nasty deceptions, Russell proves that, where nature is concerned, "wonder is not only our starting point, it can also be our destination." Throughout this botanical journey, she reveals that the science behind these intelligent plants-how they evolved, how they survive, how they heal-is even more awe-inspiring than their fleeting beauty. Russell helps us imagine what a field of snapdragons looks like to a honeybee, and she introduces us to flowers that regulate their own temperature, attract pollinating bats, even smell like a rotting corpse. She also delves into cutting-edge research on everything from flower senses to their

healing power. Long used to ease everything from depression to childbirth, flowers are now our main line of defense against childhood leukemia and the deadly Ebola virus. In this poetic rumination, which combines graceful writing with a scientist's clarity, Russell brings together the work of botanists around the globe, and illuminates a world at once familiar and exotic.

Argues that the mythology of the cowboy should be replaced by new icons reflecting the realities of the modern West, including water shortages, overgrazing, and the need to protect western wildlife and wilderness.

Brian Bouldrey traveled to the island of Corsica, with its wine-dark Mediterranean waters, powdered-sugar beach sand, sumptuous cuisine, and fine wine. And then he walked away from all of them. Bouldrey strapped on a backpack and walked across Napoleon's native land with the same spirit many choose to dance or drink: to celebrate, to mourn, to think, to avoid thinking, to recall, to ignore, to escape, and to arrive. This wonderfully textured account of a two-week ramble along a famous Corsican hiking trail with his German friend Petra (she was good at the downhill while he was better at the uphill) offers readers a journal that is a launching point for reflection: thoughts on cultural differences, friendship, physical challenge, personal challenge, and getting

very, very lost. Part travelogue, part memoir, and part lampoon, this book offers readers an impressionistic view of a little talked about yet stunningly beautiful landscape. On a hotter and more volatile earth in the twenty-third century, humans like Clare and Jon live in utopia, hunting and gathering in small tribal bands, engaged in daily art and ritual, reunited with old friends like the shaggy mammoth and giant ground sloth. Even better, they still have solar-powered laptops and can communicate with each other around the world. The understanding of physics has also advanced. When scientists first cloned extinct species from the Pleistocene, they discovered that many of them were telepathic—that consciousness travels in waves. For most people, animism has become the preferred religion, a panpsychism compatible with the laws of a fractal holographic universe. As Clare tells one of her students, the return to an older, Paleolithic lifestyle is “one of humanity’s greatest achievements.” It’s too bad that utopia had to come at such a cost: a genetically engineered super-virus that wiped out most of earth’s human population. Humanity was shaken by that event, and

humanity vowed to change. Now, on the 150th anniversary of that catastrophe, a small group of men and women—as well as a smarter-than-average dire wolf and saber-toothed cat—are suddenly faced with decisions in which the stakes are higher than ever before. Will earth repeat the cycle of unbridled hubris? Or is humanity's destiny even stranger than that? Skyhorse Publishing, under our Night Shade and Talos imprints, is proud to publish a broad range of titles for readers interested in science fiction (space opera, time travel, hard SF, alien invasion, near-future dystopia), fantasy (grimdark, sword and sorcery, contemporary urban fantasy, steampunk, alternative history), and horror (zombies, vampires, and the occult and supernatural), and much more. While not every title we publish becomes a New York Times bestseller, a national bestseller, or a Hugo or Nebula award-winner, we are committed to publishing quality books from a diverse group of authors.

From the bestselling author of *An Obsession with Butterflies* comes a magical story of America in the time of the conquistadors. In 1528, the real-life conquistador Cabeza de Vaca shipwrecked in the New World where he lived for eight years as a slave, trader, and shaman. In this lyrical weaving of history and myth, the adventurer takes his young daughter Teresa from her home in Texas to walk westward into the setting sun, their

travels accompanied by miracles--visions and prophecies. But when Teresa reaches the outposts of New Spain, life is not what her father had promised. As a kitchen servant in the household of a Spanish official, Teresa grows up estranged from the magic she knew as a child, when she could speak to the earth and listen to animals. When a new epidemic of measles devastates the area, the sixteen-year-old sets off on her own journey, befriendng a Mayan were-jaguar who cannot control his shape-shifting and a warhorse abandoned by his Spanish owner. Now Teresa moves through a land stalked by Plague: smallpox as well as measles, typhus, and scarlet fever. Soon it becomes clear that Teresa and her friends are being manipulated and driven by forces they do not understand. To save herself and others, Teresa will find herself listening again to the earth, sinking underground, swimming through limestone and fossil, opening to the power of root and stone. As she searches for her place in the New World, she will travel farther and deeper than she had ever imagined. Rich in historical detail and scope, *Teresa of the New World* takes you into the dreamscape of the sixteenth-century American Southwest. Sky Pony Press, with our Good Books, Racehorse and Arcade imprints, is proud to publish a broad range of books for young readers—picture books for small children, chapter books, books for middle grade readers, and novels for young adults. Our list includes bestsellers for children

who love to play Minecraft; stories told with LEGO bricks; books that teach lessons about tolerance, patience, and the environment, and much more. While not every title we publish becomes a New York Times bestseller or a national bestseller, we are committed to books on subjects that are sometimes overlooked and to authors whose work might not otherwise find a home.

Sharman Apt Russell's wise and haunting new memoir about her life as a pantheist. Perhaps no other religious philosophy is as simple and inclusive as pantheism. What is, right now, is divine; there is no god apart from the universe itself. In *Standing in the Light*, Russell explores the history of this tradition from the Stoic philosophers to the Transcendentalists while reflecting on her own life during a year spent in the mountains and desert of southwestern New Mexico. A season of banding birds, the migration of sandhill cranes, the panicked charge of a young javelina—nature provides the inspiration for meditations on subjects ranging from Buddhist thought to the death of her father, from the Quaker tradition to the sadness of children leaving home, from global warming to the ineffable loneliness of human experience. With a humane heart, an inquisitive mind, and luminescent prose, Sharman Apt Russell invites skeptics, scientists, and seekers everywhere to join her in her exploration of the soul of

pantheism.

On August 9th, 1945, the US dropped an atomic bomb on Nagasaki. It killed a third of the population instantly, and the survivors, or hibakusha, would be affected by the life-altering medical conditions caused by the radiation for the rest of their lives. They were also marked with the stigma of their exposure to radiation, and fears of the consequences for their children. Nagasaki follows the previously unknown stories of five survivors and their families, from 1945 to the present day. It captures the full range of pain, fear, bravery and compassion unleashed by the destruction of a city. Susan Southard has interviewed the hibakusha over many years and her intimate portraits of their lives show the consequences of nuclear war. Nagasaki tells the neglected story of life after nuclear war and will help shape public debate over one of the most controversial wartime acts in history. Published for the 70th anniversary of the Hiroshima and Nagasaki bombs, this is the first study to be based on eye-witness accounts of Nagasaki in the style of John Hersey's Hiroshima. On August 9th, 1945, three days after the atomic bombing of Hiroshima, a 5-tonne plutonium bomb was dropped on the small, coastal city of Nagasaki. The explosion destroyed factories, shops and homes and killed 74,000 people while injuring another 75,000. The two atomic

bombs marked the end of a global war but for the tens of thousands of survivors it was the beginning of a new life marked with the stigma of being hibakusha (atomic bomb-affected people). Susan Southard has spent a decade interviewing and researching the lives of the hibakusha, raw, emotive eye-witness accounts, which reconstruct the days, months and years after the bombing, the isolation of their hospitalisation and recovery, the difficulty of re-entering daily life and the enduring impact of life as the only people in history who have lived through a nuclear attack and its aftermath. Following five teenage survivors from 1945 to the present day Southard unveils the lives they have led, their injuries in the annihilation of the bomb, the dozens of radiation-related cancers and illnesses they have suffered, the humiliating and frightening choices about marriage they were forced into as a result of their fears of the genetic diseases that may be passed through their families for generations to come. The power of Nagasaki lies in the detail of the survivors' stories, as deaths continued for decades because of the radiation contamination, which caused various forms of cancer. Intimate and compassionate, while being grounded in historical research Nagasaki reveals the censorship that kept the suffering endured by the hibakusha hidden around the world. For years after the bombings news reports and scientific research were censored by U.S.

occupation forces and the U.S. government led an efficient campaign to justify the necessity and morality of dropping the bombs. As we pass the seventieth anniversary of the only atomic bomb attacks in history Susan Southard captures the full range of pain, fear, bravery and compassion unleashed by the destruction of a city. The personal stories of those who survived beneath the mushroom clouds will transform the abstract perception of nuclear war into a visceral human experience. Nagasaki tells the neglected story of life after nuclear war and will help shape public discussion and debate over one of the most controversial wartime acts in history.

This wryly humorous collection of stories about bizarre medical treatments and cases offers a unique portrait of a bygone era in all its jaw-dropping weirdness. A puzzling series of dental explosions beginning in the nineteenth century is just one of many strange tales that have long lain undiscovered in the pages of old medical journals. Award-winning medical historian Thomas Morris delivers one of the most remarkable, cringe-inducing collections of stories ever assembled. Witness Mysterious Illnesses (such as the Rhode Island woman who peed through her nose), Horrifying Operations

(1781: A French soldier in India operates on his own bladder stone), Tall Tales (like the "amphibious infant" of Chicago, a baby that could apparently swim underwater for half an hour), Unfortunate Predicaments (such as that of the boy who honked like a goose after inhaling a bird's larynx), and a plethora of other marvels. Beyond a series of anecdotes, these painfully amusing stories reveal a great deal about the evolution of modern medicine. Some show the medical profession hopeless in the face of ailments that today would be quickly banished by modern drugs; but others are heartening tales of recovery against the odds, patients saved from death by the devotion or ingenuity of a conscientious doctor. However embarrassing the ailment or ludicrous the treatment, every case in *The Mystery of the Exploding Teeth* tells us something about the knowledge (and ignorance) of an earlier age, along with the sheer resilience of human life.
