## ~~The 5 Steps To Effective Data Protection – Baldon James~~

Product data management (PDM) or Product information management (PIM) is the business function often within product lifecycle management (PLM) that is responsible for the management and publication of product data. In software engineering, this is known as version control. The goals of product data management include ensuring all stakeholders share a common understanding, that confusion during the execution of the processes is minimized, and that the highest standards of quality controls are ...

EDIF enables different software to exchange accurate, lossless data, which aids in integrated product development.

Finite Element Analysis (FEA): A method of digitally simulating and analyzing how engineering structures act and react under various conditions. The process works by dividing an engineering project like IPD into its constituent components to make reasonable assumptions about their joined behavior, hence the “finite” part of the name.
