In-situ conservation aims to enable biodiversity to maintain itself within the context of the ecosystem in which it is found. In-situ management approaches can either be targeted at populations of selected species (species-centred) or whole ecosystems (ecosystem-based). Traditionally, protected areas have been seen as the cornerstone of in-situ conservation. Conservation approaches that are more adaptable to individual situations and applicable beyond protected areas, are being increasingly ...

In-situ conservation definition | Biodiversity A-Z

In-situ conservation is on site conservation or the conservation of genetic resources in natural populations of plant or animal species, such as forest genetic resources in natural populations of tree species. It is the process of protecting an endangered plant or animal species in its natural habitat, either by protecting or cleaning up the habitat itself, or by defending the species from predators.

Conservations of Biodiversity: In-Situ Conservation and Ex ...

In-situ conservation is one of two basic conservation strategies, alongside ex-situ conservation. Article 8 of the Convention on Biological Diversity (CBD) specifies in-situ conservation as the primary conservation strategy, and states that ex-situ measures should play a supportive role to reach conservation targets. In-situ conservation aims to enable biodiversity to maintain itself within the context of the

In-situ conservation - Biodiversity A-Z

In-situ maintenance of biodiversity through the establishment of conservation and multiple-use areas offers distinct advantages over off-site methods in terms of coverage, viability of the resource, and the economic sustainability of the methods: (1) Coverage.

Chapter 2 - In-situ conservation of biodiversity

In situ conservation is the on-site conservation of genetic resources in natural populations of plants or animal species such as forest genetic resources, in natural populations of tree and animal species. The process of protecting an endangered plant or animal species in its natural habitat is commonly known as in situ conservation.
