Growing up in the church often lacks the beauty and meaning that God envisioned. John King s ministry as a pastor and teacher spanned the years from 1969 to 1993. He and his family moved 17 times in those years, and pastored in five churches, once even moving several times while at the same church. Occasionally down to the last jar of peanut butter, faith played a real part in their spiritual journey. And then there were the children. With nary a negative word for the adults, *Can You See God in This Picture?* tells the story of what passion for God can accomplish, both constructively and destructively, and explores the angry and stupid

things adults do in the church, which children see and remember. Written as a letter to his three sons, and with many personal admissions and anecdotes, this memoir has the potential to bless any whose faith has been tested, perhaps even destroyed, through church power struggles, theological bickering, political infighting, and all the other things that burn out even the good pastors and sometimes even force them out of the pulpit. Pastor King was known in Western Pennsylvania for his knowledge of Koine Greek and Classical Hebrew, having taught in Western PA Bible Institute in Butler, The Lighthouse Ministry in Washington, and Faith Seminary in Bethel Park, PA in the 1970 s. He also taught at the Charismatic Conference in 1979 at Duquesne University. He graduated from a four year ministerial program at Northeast Bible College, which is now Valley Forge Christian College, and later returned to complete a course of study for a B.S. in Bible. In 1982, he received a Master of Bible Theology from the International Bible Institute & Seminary. Currently retired from the pastorate, he develops computer software at a financial- services firm in Boston and lives with his wife in their townhouse in a nearby town. He occasionally speaks at area churches, including the one he regularly attends, and he still harbors the dream of someday perhaps returning to professional ministry.

Richie Klingman, the only representative of the “ paparazzi ” in Quincy, chased Sam down with his camera in an attempt to grab a quick shot of the local celebrity sleuth. But when the flashbulb went off in her face, she went off on him—or on his bike--and down it went, Richie and all. Turns out that one of the photos Richie took caught the precise moment of a murder on film. The next thing Sam knows, Richie himself has been stabbed and is in the hospital with a serious chest wound. Sam is stumped. There are no suspects. Instead there are round-the-clock police protecting Sam and her kids, who are home from college for the summer. And there is round-the-clock involvement with her old high school beau George, whom Sam has finally forgiven for standing her up on prom night. When at last a suspect emerges, Sam is confronted with her own mortality yet again. In this third book of the Sam Darling mystery series, you'll be wondering whodunit right up until the murderer is fully exposed and the picture finally emerges. A concise and accessible guide to techniques for detecting doctored and fake images in photographs and digital media. Stalin, Mao, Hitler, Mussolini, and other dictators routinely doctored photographs so that the images aligned with their messages. They erased people who were there, added people who were not, and manipulated backgrounds. They knew if they changed the visual record, they could change history. Once, altering images required hours in the darkroom; today, it can be done with a keyboard and mouse. Because photographs are so easily faked, fake photos are everywhere—supermarket tabloids, fashion magazines, political ads, and social media. How can we tell if an image is real or false? In this volume in the MIT Press *Essential Knowledge* series, Hany Farid offers a concise and accessible guide to techniques for detecting

doctored and fake images in photographs and digital media. Farid, an expert in photo forensics, has spent two decades developing techniques for authenticating digital images. These techniques model the entire image-creation process in order to find the digital disruption introduced by manipulation of the image. Each section of the book describes a different technique for analyzing an image, beginning with those requiring minimal technical expertise and advancing to those at intermediate and higher levels. There are techniques for, among other things, reverse image searches, metadata analysis, finding image imperfections introduced by JPEG compression, image cloning, tracing pixel patterns, and detecting images that are computer generated. In each section, Farid describes the techniques, explains when they should be applied, and offers examples of image analysis.
