The report suggests how scientifically valid and broadly applicable assessments might be developed for the three target populations Findings and related recommendations are provided in five critical areas: instrument development, research on learning, computer-based assessment methods, framework development, and public perceptions of technology."--Jacket.

Internet Management is an encyclopedia of Internet management know-how. Over the course of 50 chapters, experts provide advice on everything from choosing the right Web database to finding a reliable Web consultant, and the implications of using CGI to the pros and cons of using GIF. And throughout, coverage is supplemented with helpful examples, fascinating and instructive case studies, and hundreds of illustrations.

One of the most striking phenomena of China's remarkable economic growth is that its huge volume of exports are becoming high-tech. China is now the world's largest Information and Communication Technology (ICT) exporter, having overtaken Japan and the European Union in 2003 and the United States in 2004. China's ICT industry is also the largest manufacturing sector within the Chinese economy. This book examines how China has attained this leading position and presents one of the

Access Free Information Technology Paper 1

first accounts of China's ICT development model with specific reference to the experiences of East Asian 'tigers'. It shows how the development of the industry was military-driven before 1978, and how subsequently Chinese policymakers, struggling with domestic market reform and challenged by trade liberalisation and globalisation, managed to push through ICT development strategies. Overall, it discusses the debates between policymakers as to the most appropriate economic development strategy for 'catching-up' and demonstrates how China moved away from the across-the-board protectionist and interventionist industrial policies pursued by many developing countries, but has not wholeheartedly followed the neo-liberal free trade and market polices favoured by the World Bank, WTO and IMF. By doing so, it sheds light on the limitations of China's

Access Free Information Technology Paper 1

November 2011
strategies moving forward, and identifies policy lessons for other developing countries.

Around the world, citizens in local communities are utilising ICTs to underpin the creation of a participatory and democratic vision of the network society. Embedded in the richness and diversity of community practice, a vision of a 'civil network society' is emerging. A society where ICTs are harnessed as tools to improve the quality of life and reflect the diversity of social networks; where people are viewed as citizens, not just as consumers, and where heterogeneity is perceived as a strength rather than a weakness. Community Practice in the Network Society looks at the broad context in which this is happening, presents case studies of local projects from around the world, and discusses

Access Free Information Technology Paper 1

community ICT research methodologies. Not only does it highlight the symbiotic relationship between community ICT practice and research, but it also provides evidence supporting the case for the development of more inclusive and participatory pathways to the network society.
