This book is both an analytic and imaginative study of the future role of education in a leisure-based society. Grounded in a philosophical approach that draws on the work of Aristotle, Arendt, Keynes, and others, the volume deconstructs modern work-based society, as well as mainstream

institutionalized education, which the author argues have systemically alienated students from their education, authorial agency, and society itself. The author argues for the value of intrinsic education, where the goals are based on students' own needs and interests, imagining new opportunities that can

arise from the  
emergence of such a  
society.

People spend increasing  
amounts of time and  
effort interacting with  
complex hardware and  
software products. Some  
of the products we  
interact with are easy to

Others are hard to learn, hard to use, and frustrate us at every turn. But it is not just the user that pays the cost in such cases. Poor usability also imposes significant costs on product producers. Companies that make hard-to-use products incur higher support costs, spend more on rework, and have less satisfied

customers. These outcomes can be avoided by applying the techniques of usability engineering and user-centred design (UCD) during product development. This book shows how usability and UCD practitioners do this by studying users' needs and abilities, designing the product accordingly, and

cases where usability engineering contributed significantly to the solution of a business problem. Evidence is drawn from experiences within a range of private and public sector organizations showing how usability work can best be organized and executed within a business environment.

The organizational
