~~AN INTRODUCTION TO EH ANTENNAS~~

~~Introduction - Background of Theories Concerning the EH Antenna The EH Antenna was introduced as small dipole making use of the controversial Crossed Field Theory. One of the conditions for this mode of radiation is to arrange the magnetic (H) field in phase with the Electric (E) field. The original theory provided by the inventor was based on ...~~

~~SOME DIFFERENT IDEAS ON THE EH ANTENNA~~

~~The Hart EH Antenna consists of two (2) elements having a natural capacity between them. (Think of a fat dipole) When a voltage is applied to a capacitor an E field will be developed. Also, the current through the capacitor (called displacement current) will develop an H field at right angles to (encircle) the electric field.~~

~~The changing electric fields along the length of the antenna create radio waves that propagate outwards. An antenna radiating energy, courtesy of wikimedia.org. Antennas allow us to transmit and receive information through influencing and being influenced by the electromagnetic fields that permeate the universe.~~

~~An Introduction to Antenna Basics - Technical Articles~~

~~1.) The antenna, from poor feed line or feedpoint design, can couple to the radio chassis through external wiring or cables attached to the radio. 2.) The radio chassis itself, being large in terms of the wavelength, can actually become an antenna and receive energy from actual desired "over the air" signals. (Many of us have these problems.~~

~~Antennas act as matching systems between sources of electromagnetic energy and space. The goal in using antennas is to optimize this matching. Here is a list of some of the properties of antennas: 1-Field intensity for various directions (antenna pattern). 2-Total power radiated when the antenna is excited by a current or voltage of known intensity.~~
