Introduction To English Morphology Unizd
The Scope of Morphology Morphology: the branch of grammar that deals with the internal structure of words. A sub-branch of linguistics not until the 19th century. Evolution, biology, morphology – metaphorical extensions (roots, family, branch...) Regarded as an essentially synchronic discipline, i.e. a discipline focusing on the study of word-structure at one stage in the life of a language ...

Introduction To English Morphology Unizd

He explains the various ways in which words are related to one another, and shows how the history of the English language has affected word structure. Topics include: words, sentences and dictionaries; a word and its parts (roots and affixes); a word and its forms (inflection); a word and its relatives (derivation); compound words; word structure; productivity; and the historical sources of English word formation.

Introduction To English Morphology Unizd

This work goes back to the sources of modern English words and studies the development of vocabulary over time. It examines what constitutes a word, with a discussion of words that look and sound the same, words that have several meanings, and "words" that are made up of more than one "word". As well as considering the borrowing of words from other languages throughout the history of English as a means of increasing the vocabulary, the book also outlines how English forms new words by exploiting the structure of existing words, through processes of derivation and compounding. The meaning of a word is composite of a number of relations: reference to external context, relations with other words of a similar or opposite meaning, collocational relations, and so on. The book grapples with the meaning problem, but then goes on to look at the contexts in which words are used and the purposes for which they are used, raising the question whether it is more sensible to talk about English "vocabularies" rather than English "vocabulary".

Introduction To English Morphology Unizd

This book is at the very heart of linguistics. It provides the theoretical and methodological framework needed to create a successful linguistic project. Potential applications of descriptive linguistics include spell-checkers, intelligent search engines, information extractors and annotators, automatic summary producers, automatic translators, and more. These applications have considerable economic potential, and it is therefore important for linguists to make use of these technologies and to be able to contribute to them. The author provides linguists with tools to help them formalize natural languages and aid in the building of software able to automatically process texts written in natural language (Natural Language Processing, or NLP). Computers are a vital tool for this, as characterizing a phenomenon using mathematical rules leads to its formalization. NooJ – a linguistic development environment software developed by the author – is described and practically applied to examples of NLP.

Introduction To English Morphology Unizd

An engaging celebration of global linguistic diversity, with plenty of fascinating cases of cross-linguistic variation in each chapter.

Introduction To English Morphology Unizd

There is an increasing number of dictionary types and lexical search-tools designed to respond to an ever-growing array of user needs. The quest for innovation, however, is not over and this is what this book shall shed light on. In the autumn of 2013, a conference entitled Planning non-existent dictionaries was held at the University of Lisbon. Scholars and lexicographers were invited to present and submit for discussion their research and practices, focusing on aspects that are traditionally perceived as shortcomings by dictionary makers and dictionary users. The topics for debate were intended to be provocative: the identification of dictionary types that have never been developed for certain languages or for a given lexical domain, as well as typological and linguistic problems that may compromise the development of lexicographic projects. We hoped that the discussion would lead to the presentation of problem-solving strategies, especially those related to corpora documentation, information technology and data presentation. We received an incredible response and have had the opportunity to acknowledge several projects that are different in size, novelty and degree of accomplishment.
