The Architect as Magician explores the connection between magic and architecture. There is a belief that a greater understanding of the meaning of magic provides insights about architecture and architects' design processes. Architects influence the effects of nature through the making of their buildings. In an analogous condition, magicians perform rituals in an attempt to influence the forces of nature. This book argues that architects could gain much by incorporating ideas from magic into their design process. The book demonstrates through historical and current examples the important influence magic has had on the practice of architecture. The authors explain how magic helps us to understand the way we infuse architecture with meaning and how magic affects and inspires architectural creation. Aimed at architects, students, scholars and researchers, The Architect as Magician helps readers discover the ambiguous and spiritual elements in their design process.

The subject of food security and land issues in Africa has become one of increased importance and contention over recent years. In particular, the focus has shifted to the role new global South donors - especially India, China and Brazil - are playing in shaping African agriculture through their increased involvement and investment in the continent. Approaching the topic through the framework of South-South co-operation, this highly original volume presents a critical analysis of the ways in which Chinese, Indian and Brazilian engagements in African agriculture are structured and implemented. Do these investments have the potential to create new opportunities to improve local living standards, transfer new technology and knowhow to African producers, and reverse the persistent productivity decline in African agriculture? Or will they simply aggravate the problem of food insecurity by accelerating the process of land alienation and displacement of local people from their land? Topical and comprehensive, Agricultural Development and Food Security in Africa offers fresh insight into a set of relationships that will shape both Africa and the world over the coming decades.

Aldo Rossi was a practicing architect and leader of the Italian architectural movement La Tendenza and one of the most influential theorists of the twentieth century. The Architecture of the City is his major work of architectural and urban theory. In part a protest against functionalism and the Modern Movement, in part an attempt to restore the craft of architecture to its position as the only valid object of architectural study, and in part an analysis of the rules

and forms of the city's construction, the book has become immensely popular among architects and design students.

The ecosystems present a great diversity worldwide and use various functionalities according to ecologic regions. In this new context of variability and climatic changes, these ecosystems undergo notable modifications amplified by domestic uses of which it was subjected to. Indeed the ecosystems render diverse services to humanity from their composition and structure but the tolerable levels are unknown. The preservation of these ecosystemic services needs a clear understanding of their complexity. The role of research is not only to characterise the ecosystems but also to clearly define the tolerable usage levels. Their characterisation proves to be important not only for the local populations that use it but also for the conservation of biodiversity. Hence, the measurement, management and protection of ecosystems need innovative and diverse methods. For all these reasons, the aim of this book is to bring out a general view on the function of ecosystems, modelling, sampling strategies, invading species, the response of organisms to modifications, the carbon dynamics, the mathematical models and theories that can be applied in diverse conditions.

"Tafuri's work is probably the most innovative and exciting new form of European theory since French poststructuralism and this book is probably the best introduction to it for the newcomer. ..."

"Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." -an excerpt

Making Home(s) in Displacement critically rethinks the relationship between home and displacement from a spatial, material, and architectural perspective. Recent scholarship in the social sciences has investigated how migrants and refugees create and reproduce home under new conditions, thereby unpacking the seemingly contradictory positions of making a home and overcoming its loss. Yet, making home(s) in displacement is also a spatial practice, one which intrinsically relates to the fabrication of the built environment worldwide. Conceptually the book is divided along four spatial sites, referred to as camp, shelter, city, and house, which are approached with a multitude of perspectives ranging from urban planning and architecture to anthropology, geography, philosophy, gender studies, and urban history, all with a common focus on space and spatiality. By articulating everyday homemaking experiences of migrants and refugees as spatial practices in a variety of geopolitical and historical contexts, this edited volume adds a novel perspective to the existing interdisciplinary scholarship at the intersection of

home and displacement. It equally intends to broaden the canon of architectural histories and theories by including migrants' and refugees' spatial agencies and place-making practices to its annals. By highlighting the political in the spatial, and vice versa, this volume sets out to decentralise and decolonise current definitions of home and displacement, striving for a more pluralistic outlook on the idea of home.

Provides a comprehensive survey of the East Asian bond markets, identifies best practices for fostering their development, and presents a broad agenda for further reforms. East Asia's spectacular economic performance over the past several decades has been marked by macroeconomic stability, consistent growth, low inflation, the lowering of trade barriers, and an overall improvement in living standards. The region now has a well developed banking system and boasts four of the top 20 stock markets in the world. Its bond markets, however, are relatively small and at an early stage of development. This report provides a comprehensive survey of the East Asian bond markets, identifies best practices for fostering their development, and presents a broad agenda of reforms for their further development. The report, which is based on studies of bond markets in China, Hong Kong, Indonesia, the Republic of Korea, Malaysia, the Philippines, Singapore, and Thailand, finds great diversity among those markets. It was presented at the Emerging Asian Bond Market Conference, co-sponsored by the World Bank and the Hong Kong Monetary Authority and held in Hong Kong, June 26-27, 1995. It is believed that with the proper institutional prerequisites in place, the markets will grow very rapidly and become a leading source of financing for the region. "The [study] and this conference mark the World Bank's increasing support and participation in the development of bond markets in the region." --Joseph Yam, Chief Executive, Hong Kong Monetary Authority

The first comprehensive assessment of global volcanic hazards and risk, with detailed regional profiles, for the disaster risk reduction community. Also available as Open Access.
