## ~~Deployment — TRON Documentation~~

The complete syntax and semantics for the deployment descriptor is defined in Chapter 13 of the Servlet API Specification, version 2.3. Over time, it is expected that development tools will be provided that create and edit the deployment descriptor for you. In the meantime, to provide a starting point, a basic `web.xml` file is provided. This

~~and x64)~~

Unless you specify a Java version for your deployment, the Maven archetype defaults to Java 8 during deployment to Azure. Specify the deployment version. You can control the version of Java targeted by the Maven archetype by using the `-DjavaVersion` parameter. The value of this parameter can be either 8 or 11.
