The control and data flow of a program can be represented using continuations, a concept from denotational

There is a large gap between engineering courses in tensor algebra on one hand, and the treatment of

linear transformations within classical linear algebra on the other.

This book addresses primarily engineering students with some initial knowledge of matrix algebra.

Thereby, mathematical formalism is applied as far as it is absolutely necessary. Numerous exercises

provided in the book
are accompanied by
solutions enabling
autonomous study.

The last chapters deal
with modern

This second title in the series published for the Space Telescope Science Institute researches the current models of quasar absorption and the systems of absorption lines in the spectra of quasars. Experts in this field discuss the nature of

the absorbing process in the vicinity of quasars, the "Lyman-alpha forest", metal-line systems, and quasars as probes of high redshift galaxies. The Hubble Space Telescope will be a valuable tool for learning more about the physics and astronomy of quasars.
