Knowledge representation and reasoning - Wikipedia

Knowledge representation and reasoning are the parts of AI that are concerned with how an agent uses what it knows in Page 12/36

deciding what to do. It is the study of thinking as a computational process. The book introduces the symbolic structures invented for representing knowledge and the computational processes devised for reasoning with those symbolic structures.

This landmark text takes the central concepts of knowledge representation developed over the last 50 years and illustrates them in a lucid and compelling way. Each of the various styles of representation is presented in a simple and intuitive form, and the basics of reasoning Page 14/36

with that representation are explained in detail.

Knowledge Representation and Reasoning (KR, KRR) represents information from the real world for a computer to understand and then utilize this knowledge to solve complex real-life problems like communicating with human beings in natural language.

What is Knowledge Representation in AI?

• Introduction to techniques used to represent symbolic knowledge • Associated methods of automated reasoning • The three systems that we saw – use symbolic knowledge representation and reasoning – But, they also use non-

symbolic methods • Non-symbolic methods are covered in other courses (CS228, CS229, ...)

Knowledge Representation and Reasoning ability derives in part from reasoning over explicitly represented knowledge – language understanding, – planning, – Page 21/36

diagnosis, – "expert systems", etc. Some, to a certain extent game-playing, vision, etc.
