Body roll (or lean) happens when you turn into a corner. As your car begins to turn, its weight is thrown to the outside of the corner, causing your car to roll in that direction. Put simply, as you turn left you are thrown to the right and turning right throws you left. Your wheels are in constant contact with the ground so always stay on the same level but your car's body (and, by extension, the cabin in which you're sitting) sit on top of springs attached (indirectly) to your wheels

A Brief History of Lean

Feltovich said that since beginning to apply lean production principles to the collision repair environment in the early 2000s, he has seen committed shops realize a multitude of benefits for their businesses. “The lean process is designed to increase sales and profitability, improve ROI and decrease cycle time,” said Feltovich, who works with dealers, independent collision repairers and MSOs to make business improvements and achieve performance goals.
