Is nature all there is? John Haught examines this question and in doing so addresses a fundamental issue in the dialogue of science with religion. The belief that nature is all there is and that no overall purpose exists in the universe is known broadly as 'naturalism'. Naturalism, in this context, denies the existence of any realities distinct from the natural world and human culture. Since the rise of science in the modern world has had so much influence on naturalism's intellectual acceptance, the author focuses on 'scientific' naturalism and the way in which its defenders are now attempting to put a distance between contemporary thought and humanity's religious traditions. Haught seeks to provide a reasonable, scientifically informed alternative to naturalism. His approach will provide the basis for lively discussion among students, scholars, scientists, theologians and intellectually curious people in general.

Leaving behind her stifling Texas roots, Sue Anne Devereaux plans to open a chocolate shop in her new hometown of Missoula, Montana. She's busy as a bee, joining the women's business league and drumming up new customers. But there's one big distraction: Zach Crippen--the kind of good-looking devil who makes her question if chocolate alone can give her life the sweetness it needs. Security guard Zach can't wait to finish his penance at Missoula's tiny airport, where he was banished after he made a mistake at a larger airport. He'll do anything it takes to get back his reputation and move on to a metropolitan assignment. A casual fling--no strings attached--would be fine with him, but the quirky woman who makes the best chocolate he's ever tasted deserves more than he can give her. Will their dreams cost them a chance at the future, or can they find a way to have their chocolate and eat it, too? Sensuality Level: Behind Closed Doors

A dangerous new order threatens the mission of the Knights of Arrethtrae. Only loyalty to the King can bring victory! As the Knights of the Prince await His triumphant return, they are steadfast in their mission to take His story into the kingdom and recruit as many as are willing. But when a new and dangerous threat is revealed, their mission is jeopardized. Sir Kendrick and his young charge, the impetuous Sir Duncan, are sent on a mission to discover the identity and origin of a secretive new order known as the Conquistero Knights. They travel to the city of Bel Lione where Lord Ra has been enticing young people in the kingdom to join his festivals, after which many choose not to return home. Their families keep quiet for fear of repercussion. When Sir Duncan disappears while trying to discover the truth of Lord Ra's castle, Sir Kendrick attempts to find and enlist the help of a mysterious warrior. Time is short for he must save Duncan and call upon the knights of Chessington to join in the battle against the evil Lord Ra. Journey to Arrethtrae, where these knights of noble heart live and die in loyal service to the King and the Prince. These knights are mighty, for they serve a mighty King. They are...the Knights of Arrethtrae!

Greenwood Plantation in the Red Hills region of southwest Georgia includes a rare one-thousand-acre stand of old-growth longleaf pine woodlands, a remnant of an ecosystem that once covered close to ninety million acres across the Southeast. The Art of Managing Longleaf documents the sometimes controversial management system that not only has protected Greenwood's "Big Woods" but also has been practiced on a substantial acreage of the remnant longleaf pine woodlands in the Red Hills and other parts of the Coastal Plain. Often described as an art informed by science, the Stoddard-Neel Approach combines frequent prescribed burning, highly selective logging, a commitment to a particular woodland aesthetic, intimate knowledge of the ecosystem and its processes, and other strategies to manage the longleaf pine ecosystem in a sustainable way. The namesakes of this method are Herbert Stoddard (who developed it) and his colleague and successor, Leon Neel (who has refined it). In addition to presenting a detailed, illustrated outline of the Stoddard-Neel Approach, the book--based on an extensive oral history project undertaken by Paul S. Sutter and Albert G. Way, with Neel as its major subject--discusses Neel's deep familial and cultural roots in the Red Hills; his years of work with Stoddard; and the formation and early years of the Tall Timbers Research Station, which Stoddard and Neel helped found in the pinelands near Tallahassee, Florida, in 1958. In their introduction, environmental historians Sutter and Way provide an overview of the longleaf ecosystem's natural and human history, and in his afterword, forest ecologist Jerry F. Franklin affirms the value of the Stoddard-Neel Approach.

This book addresses the problems of the nature of the category of aspect, its formal expression and its relation to Action modes, to the Aorist/Imperfect and Perfect/Non-Perfect distinctions. The discussion is largely based on data from Bulgarian - a Slavonic language where aspect as a grammatical category systematically coexists not only with verbal prefixation, but also with temporal boundedness, correlation and, in the nominal sphere, definiteness. Cross-language parallels with English and French data and the mapping of Bulgarian structures to notions drawn from the «western» tradition of aspectual study result in the outline of a framework for an integrated study of the expression of aspectuality in languages belonging to different language groups. Refuting existing views of aspect as a «compensatory» phenomenon for nominal definiteness, the book presents arguments in favour of a systematic relation between verbal prefixation and NP quantification in Slavonic languages and of a compositional, syntactic dimension of

aspectual analysis.

Why is the word madre, "mother," so complicated in Spanish—especially in Mexico? Leaping off the page with energy, insight, and attitude, Liza Bakewell's exploration of language is anything but "just semantics." Why does me vale madre mean worthless, while !qué padre! means fabulous, she asks? And why do one hundred madres disappear when one padre enters the room, converting the group from madres to padres? Thus begins a journey through Mexican culture in all its color: weddings, dinner parties, an artist's studio, heart-stopping taxi rides, angry journalists, corrupt politicians, Blessed Virgins, and mothers both sacred and profane. Along the way, a reader discovers not only an invaluable lexicon of Mexican slang (to be used with caution or not at all) but also thought-provoking reflections on the evolution of language; its winding path through culture, religion, and politics; and, not least, what it means—and what it threatens—to be a creative female, a madre.

The modeling of item response data is governed by item response theory, also referred to as modern test theory. The eld of inquiry of item response theory has become very large and shows the enormous progress that has been made. The mainstream literature is focused on frequentist statistical methods for - timating model parameters and evaluating model t. However, the Bayesian methodology has shown great potential, particularly for making further - provements in the statistical modeling process. The Bayesian approach has two important features that make it attractive for modeling item response data. First, it enables the possibility of incorpor- ing nondata information beyond the observed responses into the analysis. The Bayesian methodology is also very clear about how additional information can be used. Second, the Bayesian approach comes with powerful simulation-based estimation methods. These methods make it possible to handle all kinds of priors and data-generating models. One of my motives for writing this book is to give an introduction to the Bayesian methodology for modeling and analyzing item response data. A Bayesian counterpart is presented to the many popular item response theory books (e.g., Baker and Kim 2004; De Boeck and Wilson, 2004; Hambleton and Swaminathan, 1985; van der Linden and Hambleton, 1997) that are mainly or completely focused on frequentist methods. The usefulness of the Bayesian methodology is illustrated by discussing and applying a range of Bayesian item response models.
