In Syria and the Middle East Peace Process, Alasdair Drysdale and Raymond A. Hinnebusch, two noted Middle East scholars, present the first detailed examination of Syria's role in the long struggle for an Arab-Israeli peace. They paint a surprising portrait of a county whose

power is out of proportion to its size, economy, and resources. They explore the reasons behind this phenomenon most importantly, the Machiavellian brilliance of its leader, Hafez al-Asad. The authors address the origins of the Asad regime, Syria's strategy toward its Arab neighbors, its conflict with Israel, and the history of its relationships with the Soviet Union and the United States. The authors argue forcefully that Syrian involvement is vital in an effort to resolve the Arab-Israeli conflict.

This compelling novel follows four women as they learn to balance children, estranged husbands, boyfriends, and problems at work through their faith in God. Michelle, Tonya, Mrs. Judson, and Miz Ida. African-American, white, rich, poor -- they seemingly have nothing in common. Yet every day they face the complex realities of twenty-first-century urban life as they try to balance their needs with their belief in God. Through the course of a year, these women must come to terms with the past, discover their true identities, and recognize the unexpected miracles that reveal God's all-encompassing love. These four women entertain us and invite us to join in their lives. As they welcome us, they also introduce us to the men in their lives. The men play supporting roles, adding color and zest to the lives of the Cover Girls. Bishop Jakes knows the struggles real women encounter and the losses that make it difficult to face the future. He brings compassionate insight and deep wisdom to this novel and proves that he is not only a gifted preacher, but a born storyteller.

New information and strategies for managing the energy crisis from the perspective of growing economies are presented. Numerous case studies illustrate the particular challenges that developing countries, many of which are faced with insufficient resources, encounter. As a result, many unique strategies to the problems of energy management and conservation, environmental engineering, clean technologies, biological and chemical waste treatment and waste management have been developed.

This book examines the interaction between art, design, technology and the social sciences. It features 56 papers that were presented at the International Symposium on Research of Arts, Design and Humanities, ISRADH 2014, held at Sutera Harbour Resort, Kota Kinabalu, Malaysia. Complete with helpful diagrams and tables, the papers cover such topics as artificial reef development, racial discourse in the social media, stoneware as a replacement material for modern ventilation walls, and factors contributing to internet abuse in the workplace. Overall, the coverage focuses on global design trends and demands with an emphasis on people, business and technology. Inside, readers will find information on art and science in industrial applications; art management and entrepreneurship; cognitive, psychological and behavioral science; design technology and sustainable development; humanities and social applications in quality of life; social implications of technology; and visual communication and technologies. Taking a multi-disciplinary approach, the book features insightful discussions among academicians and industrial practitioners on the evolution of design that will appeal to researchers, designers and students.

Although Indigenous groups include diverse cultures and colonial experiences, Indigenous communities around the globe are united by a common struggle: to achieve self-determination and land rights as original occupants of the land prior to colonization. Historically, Western law has served both as an instrument of colonial control and as a means for Indigenous peoples to assert their claims to sovereignty and territory against those of nation-states. The essays in this issue of SAQ consider historical and contemporary colonial conflicts and explore key topics in Indigenous studies, including land rights, human rights, legal jurisdiction, Indigenous governance, and questions of language, culture, and the

environment. This wide-ranging collection addresses the political possibilities of Western law and the international meanings of sovereignty and Indigeneity. One essay analyzes the autonomous government through which local citizens in Indigenous Zapatista communities in Mexico hope to dissolve systems of top-down sovereignty altogether. Another explores narratives of Native American law and the treatment of sovereignty in contemporary Mohawk visual culture. Several essays discuss the legal and political implications of the field's pivotal public documents, including the 2007 U.N. Declaration on the Rights of Indigenous Peoples. Eric Cheyfitz is the Ernest I. White Professor of American Studies and Humane Letters in the Department of English at Cornell University. N. Bruce Duthu is the Samson Occom Professor of Native American Studies and Chair of the Native American Studies Program at Dartmouth College. Shari M. Huhndorf is Associate Professor of English at the University of Oregon. Contributors: Christine Black, Eric Cheyfitz, Gordon Christie, Chris Cunneen, Jonathan Goldberg-Hiller, Lorie M. Graham, Roy M. Huhndorf, Shari M. Huhndorf, Forrest Hylton, Mara Kaufman, Alvaro Reyes, Jolene Rickard, Carlos Salinas, Noenoe K. Silva, Cheryl Suzack, Siegfried Wiessner

This book describes how surface tension effects can be used by engineers to provide mechanical functions in miniaturized products (1 mm). Even if precursors of this field such as Jurin or Laplace already date back to the 18th century, describing surface tension effects from a mechanical perspective is very recent. The originality of this book is to consider the effects of capillary bridges on solids, including forces and torques exerted both statically and dynamically by the liquid along the 6 degrees-of-freedom. It provides a comprehensive approach to various applications, such as capillary adhesion (axial force), centering force in packaging and micro-assembly (lateral force) and recent developments such as a capillary motor (torque).

In an effort to promote agro-enterprises and agro-industries as viable forms of inclusive development, the Food and Agriculture Organization of the United Nations (FAO) and The Cornell International Institute for Food, Agriculture and Development (CIIFAD) in collaboration with the International Association of Agricultural Economists (IAAE), organized an international symposium on the topic " Innovative Institutions, Public Policies, and Private Strategies for Inclusive Agro-Enterprise Development " , as part of the Triennial Meetings of the IAAE held in Foz do Iguaçu, Brazil, in August 2012. This book contains the major papers presented at the symposium, which feature a wide range of country and regional experiences and examine the influence of markets and technology transfer to agro-enterprises on food security, poverty, and economic growth. The contributions also identify alternative market access strategies for sustainable economic development. This volume will enrich existing knowledge of agro-enterprises as a channel for promoting inclusive growth and reducing poverty levels across developing and emerging markets. Contents: Preface About the Editors About the Contributors Acknowledgements Introduction Institutional Innovations Linking Small-Scale Farmers to Produce Markets in South Africa (Joyce M Chitja and Edward Mabaya) Innovative Business Models in the Thai Horticultural Sector: A Panel Data Analysis of the Impacts of GlobalGAP Certification (Sarah Holzapfel and Meike Wollni) Innovative Networks in Conservation Agriculture: Bajio Hub Case Study, Mexico (Gabriela Monsalvo-Velázquez, Ricardo Romero-Perezgrovas, Bram Govaerts and Roberto Rendón-Medel) Geography Matters: Evidence and Implications of Spatial Selection in Contract Farming Schemes in Southern India (Sudha Narayanan) Capabilities and Performance in Collective Marketing: The Importance of Learning to Cope with Agency Dilemmas (Giel Ton, Lithzy Flores, Rubén Monasterios and Evaristo Yana) Social Innovation, Entrepreneurship and New Green Jobs: Successful Experiences in Mexico (Artemisa Montes Sylvan) Sweet Sorghum: A Smart

Crop to Meet the Demands for Food, Fodder, Fuel and Feed (G Basavaraj, P Parthasarathy Rao, C Ravinder Reddy, A Ashok Kumar, S Datta Mazumdar, Y Ramana Reddy, P Srinivasa Rao, S M Karuppan Chetty and Belum V S Reddy) Promoting Food Processing Through Food Parks and Food Processing Special Economic Zones: The Indian Experience (Aradhna Aggarwal) Autonomy, Competence and Market Structure: Self-Determination Theory Applied to Small Agricultural Exporters from Latin America (Linda M Young and Theresa C Bushman) Promoting Agro-Enterprises in the Highlands of Ethiopia Through Improved Institutional Support Services: Experiences of Market-Oriented Dairy and Fattening Development (Berhanu Gebremedhin, Dirk Hoekstra and Azage Tegegne) The Role of Government in Ensuring a Level Playing Field: The Case of South Africa's Competition Commission and the Maize Milling Industry (Lulama Ndibongo Traub) The Quiet Revolution in Agri-Food Value Chains in Asia: Understanding the Fast Emergence of Cold Storages in Poor Districts in India (Bart Minten, Thomas Reardon, K M Singh and Rajib Sutradhar) Readership: Students of development studies, agribusiness practitioners, agricultural economists, food policymakers, and practitioners interested in finding out more about agribusiness and agri-industries across developing and emerging markets. Key Features: The book presents innovative institutional arrangements, novel analytical methods for analyzing them, and key policy prescriptions for bringing these innovations to scale in emerging/developing markets. It offers, in a single volume, a unique set of cross-disciplinary research on agro-enterprise development conducted by practitioners and academics from around the world. Keywords: Agribusiness; Policy; Innovation; Development; Private enterprise; Food and Agriculture Organization; Cornell University; Rural infrastructure; Agro-industries; Competitiveness; Resource mobilization

Phylogenies in Ecology is the first book to critically review the application of phylogenetic methods in ecology, and it serves as a primer to working ecologists and students of ecology wishing to understand these methods. This book demonstrates how phylogenetic information is transforming ecology by offering fresh ways to estimate the similarities and differences among species, and by providing deeper, evolutionary-based insights on species distributions, coexistence, and niche partitioning. Marc Cadotte and Jonathan Davies examine this emerging area's explosive growth, allowing for this new body of hypotheses testing. Cadotte and Davies systematically look at all the main areas of current ecophylogenetic methodology, testing, and inference. Each chapter of their book covers a unique topic, emphasizes key assumptions, and introduces the appropriate statistical methods and null models required for testing phylogenetically informed hypotheses. The applications presented throughout are supported and connected by examples relying on real-world data that have been analyzed using the open-source programming language, R. Showing how phylogenetic methods are shedding light on fundamental ecological questions related to species coexistence, conservation, and global change, Phylogenies in Ecology will interest anyone who thinks that evolution might be important in their data.

This book presents pioneering work on a range of innovative practices, experiments, and ideas that are becoming an integral part of urban climate change governance in the 21st century. Theoretically, the book builds on nearly two decades of scholarships identifying the emergence of new urban actors, spaces and political dynamics in response to climate change priorities. However, it further articulates and applies the concepts associated with urban climate change governance by bridging formerly disparate disciplines and approaches. Empirically, the chapters investigate new multi-level urban governance arrangements from around the world, and leverage the insights they provide for both theory and practice. Cities - both as political and material entities - are increasingly playing a critical role in shaping the

trajectory and impacts of climate change action. However, their policy, planning, and governance responses to climate change are fraught with tension and contradictions. While on one hand local actors play a central role in designing institutions, infrastructures, and behaviors that drive decarbonization and adaptation to changing climatic conditions, their options and incentives are inextricably enmeshed within broader political and economic processes. Resolving these tensions and contradictions is likely to require innovative and multi-level approaches to governing climate change in the city: new interactions, new political actors, new ways of coordinating and mobilizing resources, and new frameworks and technical capacities for decision making. We focus explicitly on those innovations that produce new relationships between levels of government, between government and citizens, and among governments, the private sector, and transnational and civil society actors. A more comprehensive understanding is needed of the innovative approaches being used to navigate the complex networks and relationships that constitute contemporary multi-level urban climate change governance. Debra Roberts, Co-Chair, Working Group II, IPCC 6th Assessment Report (AR6) and Acting Head, Sustainable and Resilient City Initiatives, Durban, South Africa “ Climate Change in Cities offers a refreshingly frank view of how complex cities and city processes really are. ” Christopher Gore, Associate Professor and Chair, Department of Politics and Public Administration, Ryerson University, Canada “ This book is a rare and welcome contribution engaging critically with questions about cities as central actors in multilevel climate governance but it does so recognizing that there are lessons from cities in both the Global North and South. ” Harriet Bulkeley, Professor of Geography, Durham University, United Kingdom “ This timely collection provides new insights into how cities can put their rhetoric into action on the ground and explores just how this promise can be realised in cities across the world - from California to Canada, India to Indonesia. ”

This topic is a unique attempt to simultaneously tackle theoretical and practical aspects in drought phenotyping, through both crop-specific and cross-cutting approaches. It is designed for – and will be of use to – practitioners and postgraduate students in plant science, who are grappling with the challenging task of evaluating germplasm performance under different water regimes. In Part I, different methodologies are presented for accurately characterising environmental conditions, implementing trials, and capturing and analysing the information this generates, regardless of the crop. Part II presents the state-of-art in research on adaptation to drought, and recommends specific protocols to measure different traits in major food crops (focusing on particular cereals, legumes and clonal crops). The topic is part of the CGIAR Generation Challenge Programme ’ s efforts to disseminate crop research information, tools and protocols, for improving characterisation of environments and phenotyping conditions. The goal is to enhance expertise in testing locations, and to stimulate the development and use of traits related to drought tolerance, as well as innovative protocols for crop characterisation and breeding.
