Rivoni School for the Blind is one of six schools in Limpopo that accommodates visually-impaired and blind learners and Poor state of Limpopo's special needs schools put learners at further disadvantage | Love Africa News

This study is a presentation of Zimbabwean refugee learner experiences. Children escaped political persecution and economic problems which affected Zimbabwe in the year 2008. Many of these children were abused and witnessed traumatic experiences, their close relatives and neighbours being executed in cold blood. This study was guided by three critical questions: i) who are the Zimbabwean refugee learners? ii) what were Zimbabwean refugee learners' migration experiences? and iii) what were Zimbabwean refugee learners' school experiences? The study employed Bronfenbrenner's Social Ecological Model as its overarching theoretical framework. Each stage of the refugee experience was described at each point in time.

Ours is an era when human genes can be copied and patented. From genetically modified foods to digital piracy, the concept of intellectual property (IP) and the laws upholding it play a foundational role in our society, but its political and ideological dimensions have rarely been understood outside of specialist circles. This collection cuts through the legal jargon that so often surrounds IP, to provide both a comprehensive history and analysis that explores the corporate interests that shape its conception and the movements that are developing alternatives. As the nature of industry changes, we might ask: what are the wider implications of the concept of IP, be it for agribusiness and pharmaceutical companies or the film and music industries? Has IP law has been used to safeguard and assert the ownership of ideas and creativity, or is it an essential foundation of our culture? Today, with mounting challenges from the growth of free software and open source movements, this collection provides an accessible and alternative guide to IP, exploring its significance within the wider struggle between capital and the commons.

The present book entitled "co-operative learning: a strategy for effective classroom teaching in social science" (An empirical study) has been specially designed to equip the teacher and teacher educators with as much knowledge on all aspects as per recommendations of NPE-1986, NCF-2005and 2011. Education is one of the most important factors in achieving the developmental goals of a country. Social

Science is one among those subjects which is an essential element of education. Social Science is a subject which broadens the horizon of an individual and develops various skills and provides opportunity for the professional growth of an individual. Social Science has become a greater value in the present day; Social Science has spread its net on all over the fields of life. Before the days of early printing when books were not easily available, the knowledge was imparted by the teachers from their own store by lecturing and discussion. With the advancement of educational technology and educational research the educationists evolved many teaching skills and techniques, which resulted in effective teaching. The teachers are required to teach in such a way xii that the students should learn better, understand well and also feel interested while learning. The scope of the book has been made broad-based and comprehensive and the approach is practical and functional. Practical approach followed in dealing with topics such as model approach with reference to Cooperative learning model, currents trends in social science teaching-learning process like collaborative learning approach, methodology, analysis and interpretation of data and at the end findings of research along with educational implications of present study are discussed. The author, therefore hope that this book which is very informative for teachers working at secondary schools and teacher-educators. We hope that this book would meet the needs of both the students, teachers and teacher educators and especially would be researchers in the field of education. We look forward to and appreciate suggestions from the intelligentsia to improve the book.

The complexity of 21st century lifestyle makes collaborative research and learning essential for all of the population, both in well-resourced and socio-economically challenged regions. Cross-Disciplinary Approaches to Action Research and Action Learning is an advanced reference source including the latest scholarly research on the examination of the development of a community practice of research in order to improve problem solving in various fields. Featuring extensive coverage on a broad range of topics such as social justice, organizational development, and global economy, this publication is ideally designed for academics, researchers, scholars, and managers seeking current research on the promotion of collaborative research and learning.

Maringe ought to be commended for putting together an invaluable contribution to our understanding of research into a complex education system in South Africa. This volume provides a useful foundation to the current state of education quality in South Africa including the impact of interventions. It also brings to the fore challenges still facing education transformation. The evidence presented which, taken together, lays out a coherent view of how improvements could be made. Albert Chanee Head of Planning, Gauteng Department of Education For too long the weight of educational scholarship produced in South Africa has been limited to that simple and standard form called the literature review. Now, for the first time, education researchers are provided with an African-based text on the concepts and methods of conducting systematic reviews. In this exceptional work of editorship, Felix Maringe brings together some of the leading researchers on South African education to model and demonstrate how to review a significant body of research on a chosen topic which is adjudicated strictly on the basis of the quality and efficacy of the evidence in hand. I have no doubt that this remarkable book will become a standard reference for educational researchers in and beyond the African continent. It will also lift the quality of educational inquiry by equipping a new generation of scholars with the capacity for doing evidence-based research that compels the attention of policymakers, planners and practitioners alike. Prof Jonathan Jansen Stellenbosch University

This volume brings together studies of instructional writing practices and the products of those practices from diverse Indigenous languages and cultures. By analyzing a rich diversity of contexts—Finland, Ghana, Hawaii, Mexico, Papua New Guinea, and more—through biliteracy, complexity, and genre theories, this book explores and demonstrates critical components of writing pedagogy and development. Because the volume focuses on Indigenous languages, it questions center-margin perspectives on schooling and national language ideologies, which often limit the number of Indigenous languages taught, the domains of study, and the age groups included.

The COVID-19 pandemic has introduced a new paradigm in education that has forced school management teams to re-imagine their curricula delivery functions and obligations during and post COVID-19. Now there are concerns about the state to which curriculum delivery in schools is likely to become planned, implemented, and managed. Investigating the Roles of School Management Teams in Curriculum Delivery improves the quality of planning, implementation, and management of curriculum delivery to advance the quality of teaching and learning in schools. Particularly, it envisages innovative strategies, best practices, and addresses problems in the planning, implementation, and delivery of curricula by school management teams. Covering topics such as curriculum delivery theory, curriculum delivery in planning, implementation, and management during and post COVID-19; curriculum delivery in assessment and alternative assessment; and reimagining inclusivity in curriculum delivery, this edited book is essential for departmental heads, deputy principals, education district officials, department of basic education curriculum designers, instructional designers, administrators, academicians, university teachers, researchers, and post-graduate students.

Vocational skill development (VSD) has the capacity to contribute to poverty reduction because it serves as the key to job creation and inclusive growth. As developed nations have been faced with high youth and graduate unemployment rates, basic education and vocational skill development have become a priority of development cooperation activities. However, there is a realization that measures to improve skill training can only be successful if they are in harmony with employment and economic policies. Socio-Economic Perspectives on Vocational Skill Development: Emerging Research and Opportunities is a collection of innovative research on the methods and applications of equipping individuals with relevant work skills and implementing effective skills systems that can lead to economic growth and high levels of productivity. While highlighting topics including human capital, professional development, and skill gaps, this book is ideally designed for managers, business professionals, policymakers, academicians, researchers, and management students seeking the current understanding of the strategic role of skill development at different levels of the socio-economic system.

This book focuses on issues related to mathematics teaching and learning resources, including mathematics textbooks, teacher guides, student learning and assessment materials, and online resources. The book highlights various theoretical and methodological approaches used to study teaching and learning resources, and addresses the areas of resources, teachers, and students at an international level. As for the resources, the book examines the role textbooks and other curricular or learning resources play in mathematics teaching, learning, and assessment. It asks questions such as: Could we consider different types of textbooks and roles they play in teaching and learning? How does the digitalization of information and communication affect these roles? What are defining features of e-textbooks, and how

could we characterize the differences between the traditional textbooks and e-textbooks? As for the teachers, the book discusses the relationships between teachers' individual and collective resources, and the way in which we could model such relationships. Specific questions addressed are: What is the role of teachers in developing textbooks and other teaching and learning materials? What are the relationships between resource designers and users? What are the consequences of these changing roles and relationships for the teaching of mathematics, and for teacher knowledge and professional development? As for the students, the book explores how students, as well as their teachers, interact through resources. It raises and addresses questions such as: What are the effects of modern ICT (particularly internet) on students' use and the design of resources? How do changing patterns of use and design affect student behaviour, learning, and relationships to the subject of mathematics?
