This two-volume set of 23 articles authoritatively describes recent scholarship in corporate finance and asset pricing. Volume 1 concentrates on corporate finance, encompassing topics such as financial innovation and securitization, dynamic security design, and family firms. Volume 2 focuses on asset pricing with articles on market liquidity, credit derivatives, and asset pricing theory, among others. Both volumes present scholarship about the 2008 financial crisis in contexts that highlight both continuity and divergence in research. For those who seek insightful perspectives and important details, they demonstrate how corporate finance studies have interpreted recent events and incorporated their lessons. Covers core and newly-developing fields Explains how the 2008 financial crises affected theoretical and empirical research Exposes readers to a wide range of subjects described and analyzed by the best scholars

The 12 articles in this second of two parts condense recent advances on investment vehicles, performance measurement and evaluation, and risk management into a coherent springboard for future research. Written by world leaders in asset pricing research, they present scholarship about the 2008 financial crisis in contexts that highlight both continuity and divergence in research. For those who seek authoritative perspectives and important details, this volume shows how the boundaries of asset pricing have expanded and at the same time have grown sharper and more inclusive. Offers analyses by top scholars of recent asset pricing scholarship Explains how the 2008 financial crisis affected theoretical and empirical research Covers core and newly developing fields

Experts from NYU Stern School of Business analyze new financial regulations and what they mean for the economy The NYU Stern School of Business is one of the top business schools in the world thanks to the leading academics, researchers, and provocative thinkers who call it home. In Regulating Wall Street: The New Architecture of Global Finance, an impressive group of the Stern school's top authorities on finance combine their expertise in capital markets, risk management, banking, and derivatives to assess the strengths and weaknesses of new regulations in response to the recent global financial crisis. [] Summarizes key issues that regulatory reform should address [] Evaluates the key components of regulatory reform [] Provides analysis of how the reforms will affect financial firms and markets, as well as the real economy The U.S. Congress is on track to complete the most significant changes in financial regulation since the 1930s. Regulating Wall Street: The New Architecture of Global Finance discusses the impact these news laws will have on the U.S. and global financial architecture.

This examination provides an empirical analysis of fund flows, fund returns, risk-taking activities as well as charged fund fees of funds and fund managers after gaining superstar status. For this purpose, we use published data of 296 Refinitiv Lipper Fund Award winners and 21 funds whose managers won the Morningstar Fund Manager of the Year (FMOY). For better direct comparability, we only include US-based equity mutual funds. Using a propensity score matching approach, we match the winner funds with control funds from a sample of 4211 single-managed equity benchmark funds to construct a homogenous group of funds. We employ event study and panel regression methodologies to obtain inferences about the impact of the award over time as well as in the cross-section. We find evidence that winners of both awards receive higher inflows in the nine months following the award. However, the effect of winning the FMOY Award on the abnormal fund flows is more pronounced and also statistically significant during all nine months following the ceremony. Further, in contrast to previous research, we find that Lipper Fund Award winners outperform control funds while the performance of FMOY awardees' funds deteriorates as the fund managers are unable to cope with the significant abnormal inflows. Furthermore, we do not find evidence for managers' overconfidence subsequently to winning the Lipper Fund Award or the FMOY Award. Surprisingly, Lipper Fund Award winners are associated with lower management fees as well as expense ratios while FMOY awardees' funds do not charge higher or lower fees compared to their peers. The differences in the results for the separately explored awards can be attributed to the higher exclusivity of the FMOY Awards and the related superior improvement in status.

Completely updated, this graduate text describes the current state of boiling heat transfer and two-phase flow, in terms through which students can attain a consistent understanding. Prediction of real or potential boiling heat transfer behaviour, both in steady and transient states, is covered to aid engineering design of reliable and effective systems.

In order to measure the dynamics of flow-performance relationships for a multi-domicile sample, Simon Weiler applies existing flow-performance research methods to a broad set of European equity (UCITS) funds and proves that major findings (performance-chasing behaviour and a convex flow-performance relationship) also hold true in a cross-border market environment.
