The impact factor of a journal is calculated by dividing the number of current year citations to the source items published in that journal during the previous two years. It is denoted as a ratio between citations and recent citable items published. You can either refer to the Journal Citation Reports (JCR) or the Scopus® database to find the impact factor of the journal.

## ~~Impact Factor List of Chemistry Journal—Alfa Chemistry~~

An aggregate journal impact factor of 1.0 implies that the articles in the subject category published in recent two years have been cited once on an average. The median Impact factor is the median value of all journals impact factors in the subject category. The journal impact factor extenuates the significance of absolute citation frequencies.

## ~~Open Access Journals Impact Factor | Scientific Journals ...~~

The calculation for the impact factor is quite simple.  $\text{Impact factor} = \frac{\text{Number of citations in that year} + \text{Number of citations received of articles of the journal during the two preceding years}}{\text{total number of citable items published by the journal in two preceding years}}$ . Therefore, Impact Factor for a journal in 2019 is;
