Longitudinal Waves. Launch Gizmo. Observe the propagation of longitudinal (compression) waves in a closed or open tube with evenly-spaced dividers. The strength and frequency of the waves can be manipulated, or waves can be observed as individual pulses. Compare the movement of dividers to graphs of displacement, velocity, acceleration and pressure.

Longitudinal Waves Gizmo : Lesson Info : ExploreLearning
 Sound waves are examples of longitudinal waves or waves in which particles move back and forth in the same direction as the wave. You can use longitudinal waves of Gizmo TM to investigate the behavior of sound waves. Gizmo, an air-filled tube contains 24 evenly spaced, airtight dividers. To start, select the pulsed wave setting and the Open pipe .

 In the Waves Gizmo TM , you will observe wave motion on a model of a spring. The hand can move the spring up and down or back and forth. To begin, check that the Type of wave is Transverse , Amplitude is 20.0 cm, Frequency is 0.75 Hz, Tension is 3.0 N, and Density is 1.0 kg/m. (Note: In this Gizmo, "density" refers to the linear mass density , or mass per unit length.

 A source vibrates up and down and back and forth, causing air molecules to move in a circular motion as the wave is D. A source ejects a ring of high-velocity air molecules that travel from the source to a listener. Explanation: A sound wave is an example of a longitudinal wave, in which the particle movement is in the same direction as the wave. As a sound source vibrates forward, the molecules next to the source are pushed together, forming a compression.
