discoveries of Egyptologists in this philosophical field remain thoroughly ignored. Thanks to her experience in ancient history of law and her ability to understand ancient symbols, the author provides Egyptology with the missing pieces that were needed to form a coherent image of Maat. Once revealed, Maat sheds a new and unexpected light on the whole of Egyptian civilization. As a bridge between traditionally separate fields of academic research, this book is a useful and groundbreaking contribution to Egyptology, the history of religions and the modern philosophy of law.

Although we naturally sense all the dangers of our environment through our body and subconscious, we no longer know how to use these

perceptions in order to ensure our own safety. Animals are still able to do this and this enables them to be warned and to flee before the outbreak of natural disasters. However, by learning to benefit from their dreams, humans can surpass animals in this field. The fruit of more than 20 years of research, this book explains a method that is accessible to everyone, that enables the links between the body, conscious and subconscious to be re-established, in order to receive more information on the dangers of our environment. Once communication has been re-established between the body and the subconscious, it turns out that human beings are far superior to animals and to all existing technologies in sensing all kinds of dangers, whether they be natural, human or technological. Using the technique that is explained in this book, you will learn how to 'retrieve' information available to you in dreams, that is important for the safety of you and the people close to you. Through this you will also be able to, for example: - avoid accidental death by escaping before the outbreak of a natural disaster: earthquake, volcanic eruption, landslide, flood, storm, tidal wave, avalanche, tornado, etc. ; - foil the plans of attackers, terrorists, thieves, rapists or burglars; - know, before going away, for example by boat or plane, if you are going to arrive safe and sound at your destination or if it would be better to cancel this trip because of an attack, shipwreck, accident or natural disaster... ; - sense many other traps and dangers and avoid them. - the most gifted among you will also be

able to develop a greater sensitivity and intuition directly in a waking state, which will enable you to react even more effectively to the dangers of your environment. - you will also learn not to become anxious for no reason when you have simple nightmares, because you will have learnt to detect what triggers them in you and you will thereby know how to distinguish them from true warning dreams of natural disasters, attacks, burglaries, accidents at nuclear power stations, etc.

here, as well as the use of organic foods in traditional restaurants. This is very good news ! Vegetarian Paris has now become Vegetarian and Organic Paris to include traditional French restaurants using organic products and being vegetarian-friendly. This year, I have added a "Read Me First" section in the book. Here, I have grouped information about what continues to be hard to find in Paris, including where to find wheatgrass juice, have an organic breakfast, eat without gluten, eat organic crepes, have organic Italian meals, have meals with many sprouted seeds, buy organic products with your Amex card, etc. In addition, the section includes a useful list of the restaurants that no longer exist but continue to be mentioned on many websites. In the first chapter,

Since it was developed during the industrial revolution to protect

Justice In Ancient material innovations, patent law often cannot be applied to intangible industrial inventions, such as software. International patent law must be adapted to cover the emerging virtual world, but this has not been done. Unsited to modern innovation, the author argues that international patent law has reached a period of decline. This book explains why we have reached this situation, and how and why the international patent system must be modernised and rebalanced.

Copyright laws worldwide were created for a publishing world where books were tangible, printed in a limited number and sold within territory based markets. Technological changes are giving place to a new book market where books are

intangible, exist in unlimited number of copies and travel worldwide in an increasingly global market. In this emerging global book market made possible by the conjunction of the Internet, e-book technologies, DRM and print on demand devices, the three important legal concepts traditionally used in copyright laws have become obsolete: territory, property and the Aristotelian idea of justice. These three concepts were well suited to the tangible book market but are no longer for the virtual book market where persons matter more than objects. This book invites the reader to explore the specific functioning of the virtual economy. It proposes guidelines to modernize copyright law so that it can foster an adequate use of new communication technologies. For the

Justice in History, the humankind has acquired a technology that allows to create a world of information affluence and freedom of speech or its opposite. This book explains why the option for abundance and freedom must prevail, how the law can support this movement and what would be, to the contrary, the disastrous consequences of the other option. This book goes beyond a simple reflection on the book market and considers the choice of society, even of civilization implied by the use, right or wrong, of the new communication technologies.

now turning towards democratic rule, as well as the growing utilization of information technologies in Africa, the contributors examine topics such as: the role of social media in politics, strategic political communication, political philosophy and political communication, Habermas in Africa, gender and political communication, image dilemma in Africa, and issues in political communication research in Africa, and identify the frontiers for future research on political communication in Africa.

Dreams are at the heart of a process where tangible and intangible worlds are intimately intermingled. Indeed, a dream is an intangible phenomenon occurring in a physical body that stands in an environment both material and informational (intangible). A systematic investigation of the connections between dreams and reality sheds new light on the

dream process and on the functioning of the mind. This book invites you, the reader, to discover the results you can achieve through a more comprehensive and unified approach to the dream process. It gives you advice on how to carry out your own research. Reading this book will help you become better aware of the role played by your body at the meeting point between dreams and reality, between the tangible and the intangible (Chapter 1). The book describes an efficient method for observing the dream process (Chapter 2) and explains the results you can achieve with it through your own experimentation (Chapter 3). Through your personal exploration of the whole dream process you will be able to verify for yourself the reality of certain faculties of the mind which are

commonly considered to be "paranormal". You will see that they can be explained rationally. Chapter 4 of the book explains how you can use the dream process to find answers to your questions, whether they regard your daily life (health, work, relationships, life guidance) or your artistic or scientific creativity. The last chapter (Chapter 5) explains why faculties today considered to be paranormal are destined to a natural collective awakening. With this book, I invite you to observe your dreams and their connections with your reality, with a mind as neutral as possible. This is the best way to understand the meaning of your dreams. Try, then, to forget all you have ever heard about dreams, and just look at them and observe the whole dream process, and not only the dreams. Everything I

assert in the book can be verified through personal experience by using the proposed method of observation. With this method everyone, even the most skeptical person, can verify the existence of unusual faculties of the mind, and learn to develop and use them. Africa has experienced a number of territorial disputes over land and maritime boundaries, due in part to its colonial and post-colonial history. This book explores the legal, political, and

historical nature of disputes over territory in the African continent, and critiques the content and application of contemporary International law to the resolution of African territorial and border disputes. Drawing on central concepts of public international law such as sovereignty and jurisdiction, and socio-political concepts such as colonialism, ethnicity, nationality and self-determination, this book interrogates the intimate connection that peoples and nations have to territory and the severe disputes these may lead to. Gbenga Oduntan identifies the major principles of law at play in relation to territorial, and boundary disputes, and argues that the predominant use of foreign based adjudicatory mechanisms in attempting to deal with African boundary disputes

alienates those institutions and mechanisms from African people and can contribute to the recurrence of conflicts and disputes in and among African territories. He suggests that the understanding and application of multidisciplinary dispute resolution mechanisms and strategies can allow for a more holistic and effective treatment of boundary disputes. As an in depth study into the legal, socio-political and anthropological mechanisms involved in the understanding of territorial boundaries, and a unique synthesis of an African jurisprudence of international boundaries law, this book will be of great use and interest to students, researchers, and practitioners in African and Public International Law, International Relations, and decision-makers in
