Understanding the Machinery Directive (2006/42/EC) The assembly instructions must be written in an official Community language acceptable to the manufacturer of the machinery in which the partly completed machinery will be assembled, or to his authorized representative. Risk assessment documentation should be included in the technical file.

~~Understanding the Machinery Directive (2006/42/EC)~~

The Machinery Directive, Directive 2006/42/EC of the European Parliament and of the Council of 17 May 2006 is a European Union directive concerning machinery and certain parts of machinery. Its main intent is to ensure a common safety level in machinery placed on the market or put in service in all member states and to ensure freedom of movement within the European Union by stating that "member states shall not prohibit, restrict or impede the placing on the market and/or putting into service in

ANNEX I of machinery directive 2006/42/EC - Summary Submitted by root on Thu, 06/06/2013 - 09:31 ANNEX I of machinery directive 2006/42/EC ESSENTIAL HEALTH AND SAFETY REQUIREMENTS applicable for design and manufacturing of machines - general principles

~~ANNEX I of machinery directive 2006/42/EC - Summary -~~

The Machinery Directive 2006/42/EC The Machinery Directive is EU legislation that is implemented in the member states of the European Economic Area (EEA) by local laws in order to ensure the establishment and functioning of the internal market of the EU. For this reason, The Machinery Directive 2006/42/EC, broadly speaking, has two objectives:

Machinery Directive & Harmonised Standards Directive 2006/42/EC(*) of the European Parliament and of the Council of 17 May 2006 on machinery, and amending Directive 95/16/EC (recast) with last communication references of harmonised standards(**) which have been generated by the HAS (Harmonised standards) database. Directive 2006/42/EC is a revised version of the Machinery Directive, the first version of which was adopted in 1989. The Directive has the dual aim of harmonising the health and safety requirements applicable to machinery on the basis of a high level of protection of health and safety, while ensuring the free circulation of machinery on the EU market. The machinery sector is an important part of the engineering industry and is one of the industrial mainstays of the Community economy. Machinery can be described as "an assembly, fitted with or intended to be fitted with a drive system other than directly applied human or animal effort, consisting of linked parts or components, at least one of which moves, and which are joined together for a specific application". European Commission Enterprise and Industry (*) Amendment: Directive 2009/127/EC of the European Parliament and of the Council of 21 October 2009 amending Directive 2006/42/EC with regard to machinery for pesticide application. (**)Harmonised standards 02.03.2021 Since 1 December 2019 the references of harmonised standards are published in, and withdrawn from the Official Journal of the European Union by means of "Commission implementing decisions". The references published under Directive 2006/42/EC on Machinery are found in the Commission communication published in OJ C 092 of 9 March 2019 and in the Commission Implementing Decision (EU) 2019/436 of 18 March 2019 (OJ L 75, 19 March 2019), in the Commission Implementing Decision (EU) 2019/1766 of 23 October 2019 (OJ L L 270/94 del 24 October 2019) and in the Commission Implementing Decision (EU) 2019/1863 of 6 November 2019 (OJ L 286/25 07 November 2019) listed below. They need to be read together, taking into account that the decision modifies some references published in the Communication. - Commission Implementing Decision (EU) 2021/377 of 2 March 2021 amending Implementing Decision (EU) 2019/436 on harmonised standards for machinery drafted in support of Directive 2006/42/EC of the European Parliament and of the Council (OJ L 72/12 03 March 2021) - Commission implementing Decision (EU) 2020/480 of 1 April 2020 amending Implementing Decision (EU) 2019/436 on harmonised standards for machinery drafted in support of Directive 2006/42/EC of the European Parliament and of the Council (OJ L 102/6 02 April 2020) - Commission Implementing Decision (EU) 2019/1863 of 6 November 2019 amending and correcting Implementing Decision (EU) 2019/436 as regards the withdrawal of references of harmonised standards for machinery from the Official Journal of the European Union (OJ L 286/25 07 November 2019) - Commission Implementing Decision (EU) 2019/1766 of 23 October 2019 amending Implementing Decision (EU) 2019/436 as regards harmonised standard EN ISO 19085- 3:2017 for numerically controlled boring and routing machines (OJ L L 270/94 del 24 October 2019) - Commission Implementing Decision (EU) 2019/436 of 18 March 2019 on the harmonised standards for machinery drafted in support of Directive 2006/42/EC of the European Parliament and of the Council C/2019/1932 - OJ L 75, 19 March 2019, p. 108-119 - Commission communication in the framework of the implementation of the Directive 2006/42/EC of the European Parliament and of the Council of 17 May 2006 on machinery, and amending Directive 95/16/EC (recast) - OJ C 092 of 9 March 2018

This report presents the Evaluation of Directive 2006/42/EC on Machinery. It was commissioned by EC Directorate-General for Internal Market, Industry, Entrepreneurship and SMEs (DG GROW), and undertaken by a consortium led by Technopolis Group over an 18-month period during 2016-2017. The findings and conclusions are based on a programme of research and analyses, which included a public consultation, a series of targeted consultation surveys, a programme of interviews, a review of relevant documentation and an analysis of statistical databases and reports. The focus of the evaluation is the 2006 Machinery Directive (MD), which is concerned with the free movement of machinery within the EU internal market, and with ensuring health safety of users of machinery. It is in fact the latest revision to a much earlier Directive (89/392/EEC) adopted in 1989. The purpose of the evaluation is to review the performance of the Directive and to determine the extent to which it is fit for purpose, providing evidence and conclusions that might form the basis for possible future legislative initiatives. In particular, the study is asked to assess the extent to which the Directive has met its twin objectives of (i) guaranteeing the free movement of relevant machinery within the Single Market, and (ii) ensuring a high level of safety and protection for machinery users (workers and consumers). To this end, the aims were to assess the relevance, effectiveness, coherence, efficiency and EU added value of the Directive, by addressing 18 specific evaluation questions. The evaluation covers the functioning of the Directive, including the processes involved in transposing, implementing and enforcing it. It covers all relevant product categories and 33 countries (EU28, EFTA and Turkey) and focuses on the period from 2010 (after the deadline for application of the MD).

The revised European EC Machinery Directive includes a large number of amendments which are particularly significant for practical engineering applications. They include new machinery definitions and modified applications, changes in conformity assessment for annex IV machinery, new CE-marking for safety components etc. These changes will generate many user questions which this guide can help to answer. It contains the full text of the directive and uses illustrations to provide a detailed introduction to this regulatory document. Its experienced team of authors, made up of engineers and jurists, ensures its usefulness in practically implementing the directive.

Exposure to noise at home, at work, while traveling, and during leisure activities is a fact of life for all Americans. At times noise can be loud enough to damage hearing, and at lower levels it can disrupt normal living, affect sleep patterns, affect our ability to concentrate at work, interfere with outdoor recreational activities, and, in some cases, interfere with communications and even cause accidents. Clearly, exposure to excessive noise can affect our quality of life. As the population of the United States and, indeed, the world increases and developing countries become more industrialized, problems of noise are likely to become more pervasive and lower the quality of life for everyone. Efforts to manage noise exposures, to design quieter buildings, products, equipment, and transportation vehicles, and to provide a regulatory environment that facilitates adequate, cost-effective, sustainable noise controls require our immediate attention. Technology for a Quieter America looks at the most commonly identified sources of noise, how they are characterized, and efforts that have been made to reduce noise emissions and experiences. The book also reviews the standards and regulations that govern noise levels and the federal, state, and local agencies that regulate noise for the benefit, safety, and wellness of society at large. In addition, it presents the cost-benefit trade-offs between efforts to mitigate noise and the improvements they achieve, information sources available to the public on the dimensions of noise problems and their mitigation, and the need to educate professionals who can deal with these issues. Noise emissions are an issue in industry, in communities, in buildings, and during leisure activities. As such, Technology for a Quieter America will appeal to a wide range of stakeholders: the engineering community; the public; government at the federal, state, and local levels; private industry; labor unions; and nonprofit organizations. Implementation of the recommendations in Technology for a Quieter America will result in reduction of the noise levels to which Americans are exposed and will improve the ability of American industry to compete in world markets paying increasing attention to the noise emissions of products.

This important book illustrates the implications of preservation actions on intellectual property rights and data protection. These can include: Potential violation of data protection laws through the storage of personal data, and potential infringemen

Advances in Systems Safety contains the papers presented at the nineteenth annual Safety-Critical Systems Symposium, held at Southampton, UK, in February 2011. The Symposium is for engineers, managers and academics in the field of system safety, across all industry sectors, so the papers making up this volume offer a wide-ranging coverage of current safety topics, and a blend of academic research and industrial experience. They include both recent developments in the field and discussion of open issues that will shape future progress. The 17 papers in this volume are presented under the headings of the Symposium's sessions: Safety Cases; Projects, Services and Systems of Systems; Systems Safety in Healthcare; Testing Safety-Critical Systems; Technological Matters and Safety Standards. The book will be of interest to both academics and practitioners working in the safety-critical systems arena.

This book is focused on the expansive and highly demanding subject of Food Industry "Technical & Quality Management". As the world's most vital industry "Food Production" is complex, multifaceted and continuously scrutinised. Food scares and product recalls, on national and international scales, demonstrate the persistent challenge to identify, monitor and control all hazards, and also address the increasing criminal threats of Food Fraud, Adulteration & Intentional Contamination. With the benefit of unique perspectives gained by working across Quality, Technical and Operations Management roles at all levels within the food industry, Swainson's Handbook of Technical and Quality Management considers the very diverse remits and particular challenges of those working to assure product Quality, Safety and Legality in the sector. This book provides insights and guidance on the "Applied Practice" of Industrial Quality and Technical Management, written from the perspective of the industry practitioner. "Knowing what to do is half of the challenge, but being able to then make it happen is crucial" - a fact which is often less well considered in food sector information resources. Split into two sections, the book first reviews generic aspects of Food Quality and Technical Management activities with particular regard to: Food Sector Challenges and the Role of Technical and Quality Management; Defining Technical and Quality Standards; The Food Safety and Quality Management System; Raw Materials and Packaging Supplier Control; Site Standards; Product Control and HACCP Considerations; Operations and Process Control; Personnel Control; Audits; Non-Conformance, Recall & Crisis Management; Managing the Technical Department. In the second part of the book Guest Authors share their expertise on a range of specialist topics, providing significant breadth and depth to the content which includes: Review of Third party audit schemes; Insights into supplying supermarkets with regard to good technical and quality management practices; Enforcement authority perspectives on the food manufacturing sector. Also covered are the specific sector challenges of food quality and safety assurance in Fruit and vegetables; Herbs and spices, Cereals, Baked products, Canning and "Cook - Chill" Ready Meals, Soups and Sauces. Compiled expertise of food sector specialists with extensive industrial experience. Edited by an industry and academic expert with over 25 years experience of technical and quality management in the food sector. Contains Technical and Quality Management information that is relevant to a wide range of sectors in the food industry. Also examines Technical and Quality Management practice in specific food applications and reviews relevant compliance standards.
