Communication in organizations has changed drastically since the release of the first edition of this bestselling textbook. This fully revised and updated edition delves into state-of-the-art studies, providing fresh insights into the challenges that organizations face today. Yet this foundational resource remains a cornerstone in the examination of classic research and theory in organization communication.

How do technology and organization interact to shape organizational structures and processes? What organizational, political and social processes constrain technological development? What forces shape the articulation of organizational and technological systems? Answering these and other pivotal questions, this volume centres on the role of theory for advancing our knowledge of communication technology in organizations at several levels - micro, group and macro. The distinguished contributors examine richly diverse topics, including telecommunications, communication networks and new media, the use of group decision support systems and discretionary databases.

Focusing on risky interactions, the book centres on those interactions that threaten identities and relationships and sometimes careers such as: practising dissent; repairing broken relationships; managing privacy; responding to harassment; offering criticism and communicating emotion. In doing so the text helps students understand types of work situations that are both ethically challenging and personally risky while presenting a theoretical model to help them: integrate existing research, analyze situations, and generate new questions.
