Accounting Information Systems delivers the most comprehensive and flexible coverage of each major approach to teaching AIS, giving instructors the opportunity to reorder chapters and focus the material to suit their individual course needs. The 14th Edition covers all of the most recent updates in AIS, including how developments in IT affect business processes and controls, the effect of recent regulatory developments on the design and operation of accounting systems, and how accountants can use the AIS to add value to an organization. Not only will students see how AIS has changed the role of an accountant, but they'll also be prepared for a successful accounting career in public practice, industry, or government.

Accounting Information Systems provides readers with the knowledge and skills they need to pursue successful careers in accounting. The book reflects how information technology (IT) is altering the very nature of accounting, discussing how developments such as the Internet, electronic commerce, EDI, databases, and artificial intelligence are fundamentally transforming the way organizations conduct their business activities. The authors also explore ways in which accountants can improve the design and function of Accounting Information Systems (AIS) so that they truly add value to the organization. The authors address conceptual foundations of accounting information systems including e-business, relational databases and data modeling and database design, control and audit of accounting information systems and computer fraud, accounting information systems applications including the revenue, expenditure and manufacturing cycles and the systems development

process. For those in accounting related positions.

This text seeks to show the reader how to design and use an accounting information system (AIS) to provide information useful for decision-making. Focus boxes providing real world examples of concepts, techniques and practices as described are interspersed in the text. This edition has chapters on the three basic functions of the AIS together with an understanding of what the system does manually, and on data modelling, covering how students can use query language to derive traditional financial statements and managerial reports from a database AIS.

cybercrime, ethics and the REA data model are brought to life by a wide variety of Australasian case studies and examples. With a learning and teaching resource package second to none, this is the perfect resource for one-semester undergraduate and graduate courses in Accounting Information Systems.

Intended for a one-semester course in Accounting Information Systems taught at the sophomore, junior, or senior level at most two- and four-year schools. This revision is completely streamlined, includes new pedagogy, and is accompanied by a CD-ROM containing added coverage, making it flexible enough to suit a variety of different approaches to the course.

Casebook in Accounting Information Systems bridges the gap between the theory and practice of accounting information systems analysis, design, and implementation. Projects provide students with essential hands-on experience in most of the major activities associated with analyzing, designing, and implementing an accounting information system. Students must use analytical tools gained from other accounting classes to design the best system possible -- one that provides the most useful information to the right people, at the right time, and at a competitive price.
