Expected Value | Online Videos, Quizzes & Lessons | Study.com

Check whether the company can expect a profit in the long term. Write the probability distribution. $E(X) = 49 \cdot 50 \cdot 3 + 1 \cdot 50 \cdot (\cdot 80) = 147 \cdot 50 \cdot 80 \cdot 50 = 67 \cdot 50 = 1.34$. Since the expected value is positive, the company can expect to make a profit. On average, they make a profit of \$ 1.34 per gadget produced.

Word Problems: Expected Value - Varsity Tutors

Practice with Expected Value. 1. You draw one card from a standard deck of playing cards. If you pick a heart, you will win \$10. If you pick a face card, which is not a heart, you win \$8. If you pick any other card, you lose \$6.

Practice With Expected Value - Militant Grammarian

The expected value of a difference is the difference of the expected values, and the expected value of a non-random constant is that constant. Note that $E(X)$, i.e. the theoretical mean of X , is a non-random constant. Therefore, if $E(X) = \mu$, we have $E(X - \mu) = E(X) - E(\mu) = \mu - \mu = 0$. Have a blessed, wonderful day!

Expected Value: Level 2 Challenges Practice Problems ...

In probability theory, the expected value of a random variable X $\{\displaystyle X\}$, denoted E $\{\displaystyle E\}$ or E $\{\displaystyle E\}$, is a generalization of the weighted average, and is intuitively the arithmetic mean of a large number of independent realizations of X $\{\displaystyle X\}$. The expected value is also known as the expectation, mathematical expectation, mean, average, or first moment.

Expected value is a key concept in economics, finance, and many other subjects. By definition, the

Expected value - Wikipedia

Great course! I'm a senior in high school and I decided to take Intermediate Counting & Probability because I'd never been exposed to problem-solving math before, let alone discrete math. Now, I feel ready to take the 400-level combinatorics sequence at college in a few months, and my problem-solving
