perform mathematical  
functions on cells.

There are two basic  
ways of writing

formulas available:

“ranged syntax” or  
“simple syntax.”. A

“syntax” is simply a  
way of expressing or  
writing something. It is

important to note that  
these two syntaxes

are not mutually  
exclusive!

Microsoft Excel gives more preference to operations given in parenthesis or brackets. Then to Division followed by Multiplication, Addition, and finally Subtraction. Consider this example, here the formula entered is  $(F6-F5)/F9+F8-F10$ .

First, the operation inside the parenthesis
