This book addresses the diversity of tropical microorganisms and its applications in agriculture, renewable energy production and environmental protection. It covers several tropical habitats such as rain forests, mangroves, sea and river waters and describes how microorganisms isolated from these regions can be used to control insects and plant diseases, to improve sugar cane and biofuels production among other applications. The book also aims to bring researchers' attention to the potential of tropical microorganisms for biotechnological purposes, an area that is still far from being well explored.

The annual Evolutionary Biology Meetings in Marseille aim to bring together leading scientists, promoting an exchange of state-of-the-art knowledge and the formation of inter-group collaborations. This book presents the most representative contributions to the 13th meeting, which was held in September 2009. It comprises 21 chapters, which are organized into the following three categories: • Evolutionary Biology Concepts • Genome/Molecular Evolution • Morphological Evolution/Speciation This book offers an up-to-date overview of evolutionary biology concepts and their use in the biology of the 21st century.

This book “Biodiversity of lianas” under the series “Sustainable development and Biodiversity” is unique as it covers a wide array of topics in this subject covering all continents and will constitute a valuable reference material for students, researchers and forest managers who are concerned with biodiversity, forest ecology and sustainable development of forest resources. It contains peer-reviewed chapters from leading academicians and researchers around the world in the field of Plant Ecology, Taxonomy and related areas of Biodiversity Science but, centered on Lianology and includes original research articles, case studies and reviews (regional and global) in biodiversity, ecology and phytogeography and conservation of lianas from temperate, sub-tropical and tropical forests. The interest in lianas has increased over the last two decades. The ultimate goal of this book is to provide an insight into the patterns of liana diversity, distribution, the role of lianas in structuring forest community, and functional ecology (carbon uptake, ecosystem services, dynamics and invasion), biotechnological tool for conservation of lianas and finally summarizes the significance and the need for conservation of lianas in the changing global environmental scenario.

The grim history of Nauru Island, a small speck in the Pacific Ocean halfway between Hawaii and Australia, represents a larger story of environmental degradation and economic dysfunction. For more than 2,000 years traditional Nauruans, isolated from the rest of the world, lived in social and ecological stability. But in 1900 the discovery of phosphate, an absolute requirement for agriculture, catapulted Nauru into the world market. Colonial imperialists who occupied Nauru and mined it for its lucrative phosphate resources devastated the island, which forever changed its native people. In 1968 Nauruans regained rule of their island and immediately faced a conundrum: to pursue a sustainable future that would protect their truly valuable natural resources—the biological and physical integrity of their island—or to mine and sell the remaining forty-year supply of phosphate and in the process make most of their home useless. They did the latter. In a captivating and moving style, the authors describe how the island became one of the richest nations in the world and how its citizens acquired all the ills of modern life: obesity, diabetes, heart disease, hypertension. At the same time, Nauru became 80 percent mined-out ruins that contain severely impoverished biological communities of little value in supporting human habitation. This sad tale highlights the dire consequences of a free-market economy, a system in direct conflict with sustaining the environment. In presenting evidence for the current mass extinction, the authors argue that we cannot expect to preserve biodiversity or support sustainable habitation, because our economic operating principles are incompatible with these activities.

Professional foodservice managers are faced with a wide array of challenges on a daily basis. Controlling costs, setting budgets, and pricing goods are essential for success in any hospitality or culinary business. Food and Beverage Cost Control provides the tools required to maintain sales and cost histories, develop systems for monitoring current activities, and forecast future costs. This detailed yet reader-friendly guide helps students and professionals alike understand and apply practical techniques to effectively manage food and beverage costs. Now in its seventh edition, this extensively revised and updated book examines the entire cycle of cost control, including purchasing, production, sales analysis, product costing, food cost formulas, and much more. Each chapter presents complex ideas in a clear, easy-to-understand style. Micro-case studies present students with real-world scenarios and problems, while step-by-step numerical examples highlight the arithmetic necessary to understand cost control-related concepts. Covering everything from food sanitation to service methods, this practical guide helps readers enhance their knowledge of the hospitality management industry and increase their professional self-confidence.

Shares step-by-step instructions for making dozens of sophisticated paper flowers, outlining creative projects ranging from wristlets and bookmarks to wreaths and a Mary Poppins-inspired flower.

In light of the discovery of Autoimmune Syndrome Induced by Adjuvants, or ASIA, Vaccines and Autoimmunity explores the role of adjuvants – specifically aluminum in different vaccines – and how they can induce diverse autoimmune clinical manifestations in genetically prone individuals. Vaccines and Autoimmunity is divided into three sections; the first contextualizes the role of adjuvants in the framework of autoimmunity, covering the mechanism of action of adjuvants, experimental models of adjuvant induced autoimmune diseases, infections as adjuvants, the Gulf War Syndrome, sick-building syndrome (SBS), safe vaccines, toll-like receptors, TLRs in vaccines, pesticides as adjuvants, oil as adjuvant, mercury, aluminum and autoimmunity. The following section reviews literature on vaccines that have induced autoimmune conditions such as MMR and HBV, among others. The final section covers diseases in which vaccines were known to be the solicitor – for instance, systemic lupus erythematosus – and whether it can be induced by vaccines for MMR, HBV, HCV, and others. Edited by leaders in the field, Vaccines and Autoimmunity is an invaluable resource for advanced students and researchers working in pathogenic and epidemiological studies.
