Long-standing systemic health and social inequities have put many people from racial and ethnic minority groups at increased risk of getting sick and dying from COVID-19. The term “ racial and ethnic minority groups ” includes people of color with a wide variety of backgrounds and experiences. But some experiences are common to many people within these groups, and social determinants of health have historically prevented them from having fair opportunities for economic, physical, and ...

According to the 2010 U.S. Census, approximately 36 percent of the population belongs to a racial or ethnic minority group. Though health indicators such as life expectancy and infant mortality have improved for most Americans, some minorities experience a disproportionate burden of preventable disease, death, and disability compared with non-minorities.
